This case book provides examples of multi-stakeholder partnerships that aim to create sustainable enterprises for both the for-profit sectors and for individuals who live in conditions of poverty. Ideal for teaching, after a brief introduction to the case method, the cases are presented as descriptions with no comments or criticisms. The cases are arranged thematically and cover a broad array of solutions in diverse countries including India, Bangladesh, Vietnam, Tanzania, the United States, South Africa, Mozambique, Peru, Ghana, Haiti, and Mexico. Specific programs for alleviating—or even eradicating—poverty through profitable partnerships come from myriad sectors such as banking, health, education, infrastructure development, environment, and technology. The cases highlight solutions that focus on bringing about substantive shifts in the conditions of life for those living in poverty.

This volume compiles the complete texts of the environmental policies from some of the world's leading corporations. The policy statements form the backbone of the corporation's interaction with its employees, customers and regulatory agencies, and is often a required first step of participation with environmental business standards. Each entry includes brief contact and line-of-business information, as well as information about the corporation's participation with legislation and industry environmental standard.

Over the last two decades environmental issues have become important in public and business policy. This book asks why firms sometimes voluntarily adopt environmental policies which go beyond legal requirements. It employs a new-institutionalist perspective, and argues that existing explanations, especially from neoclassical economics, concentrate on external factors at the expense of internal dynamics. Prakash argues that 'beyond-compliance' policies are due to two types of intra-firm processes, which he describes as power- and leadership-based. His argument is supported by analysis of ten cases within two firms - Baxter International Inc. and Eli Lilly and Company - including interviews with managers, and access to meetings and documents. This book therefore examines the internal working of firms' environmental policy in a theoretically rigorous way, providing a significant contribution to the theory of the firm. It will be valuable for students of business and environmental studies, as well as political economy and public policy.--Publisher description.

The first step any company must take before it can begin ISO 14001 implementation is to secure 100 percent, enthusiastic commitment from top management. Top

management is persuaded if ISO 14001 impacts the bottom line. This practical, how-to book helps you build a business case for ISO 14001. Implementing ISO 14001 brings a corporate culture change, resulting in cost savings, reduced waste, and enhanced relationships with community regulators and other stakeholders. The author explores these issues with top people in the field who have already implemented the system. She addresses: what steps did they take? has the business case been supported by experience? what are the tangible cost savings? Through these interviews you understand what elements or cost savings can be transferred to your company. You will learn how to convince senior management to implement ISO 14001 - and what business benefits your company will see through the eyes of experts who have been down that path. Once you have top management on board, you must deliver. *The Bottom Line: How to Build a Business Case for ISO 14001* shows you how to implement ISO 14001 and how it will profitably affect your bottom line.

To date, both internal and external corporate environmental reporting and management systems have focused on physical input – output measures. However, external stakeholders are increasingly demanding that organisations provide more financial information about the costs and benefits of their environmental actions. As environmental costs rise, internal decision-makers are also seeking such information to ensure that money is well spent. Beyond basic compliance, many companies will not countenance environmental actions for which a "business case" cannot be made. A number of companies – such as Baxter, BT, Xerox, Zeneca and others – are now beginning to develop a better understanding of the costs and benefits of environmental action. The US Environmental Protection Agency has also done considerable work on models designed to understand the "full costs" of pollution control investments, with the aim of demonstrating that – when these are properly considered – pollution prevention can be a more cost-effective alternative. *The Green Bottom Line* brings together much of the world's leading research and best-practice case studies on the topic. Divided into four sections, covering "General Concepts", "Empirical Studies", "Case Studies" and "Implementation", the book includes case studies from the US EPA's Environment Accounting Programme and contributions from authors at institutions including the IMD, INSEAD, Tellus Institute and the World Resources Institute. It constitutes a state-of-the-art collection.

Environmental and social performance measurement and reporting by business has become a high-profile issue during the 1990s. It is increasingly being requested by stakeholders and required by governments. Companies too are finding that they need better environmental and social performance data for effective internal management. And there are a growing number of standardisation initiatives – such as the ISO 14031 guidelines on environmental performance evaluation or the CERES Global Reporting Initiative (GRI) template for sustainability reporting – that are aimed at making it easier for more companies to take action, and for stakeholders to compare their progress. *Sustainable Measures* collects together most of the key work and

individuals concerned with the topic from around the world. Contributions include: environmental and social reporting by John Elkington and colleagues at SustainAbility; the GRI discussion draft; Roger Adams and Martin Houldin on the FEE study of environmental reporting; Janet Ranganathan of the World Resources Institute on sustainability measures; and Martin Bennett and Peter James on ISO 14031 and the future of environmental performance evaluation. There are also chapters examining current practice in Austria, Denmark, India, Indonesia, Japan, the Netherlands and South Africa, developments in electronic reporting, as well as case studies of Baxter, Kunert, Niagara Mohawk, Unox, The Body Shop and the UK water industry, and an analysis of leading social reports. The book is essential reading for all academics, campaigners, policy-makers and practitioners with an interest in issues such as: The standardization and comparability of environmental and social performance measures Measuring and reporting on sustainable business Eco-points and other means of evaluating product impacts The implementation of measurement and reporting Best practice in corporate environmental and social reporting New means of communicating environmental data Environmental performance evaluation in developing countries

Shows how to integrate the cultural dimension into coaching and coaching skills into intercultural work.

In their introduction, the editors of *New Ways of Doing Business* assert that in retrospect, it will be apparent that today's government, that of the early years of the 21st century, 'was undergoing its most significant transformation since the decade of the 1930's when direct government-delivered services grew significantly as part of the New Deal.' This newest volume in the IBM Endowment for the Business of Government series is an invaluable guide to navigating the sometimes controversial changes taking place in the internal operations of government, the delivery of services to citizens, and the delivery of environmental programs. Possibly the most monumental change taking place in our modern government is the lessening allegiance to the old model of in-house, in-departmental performance of tasks. The new model asks 'how and by whom can the tasks of government best be performed?' The answer sometimes lies with another inter-governmental department, leading to an in-house atmosphere of healthy competition and entrepreneurship, and sometimes with outside contractors. *New Ways of Doing Business* provides descriptions and guidelines for successfully navigating management under the new model. There are also dramatic new ways in which services to the public can now be delivered: via the Internet, via contracts with private organizations, and via faith-based initiatives and business improvement districts. Experts provide valuable checklists and guidelines and case studies exploring the merits and disadvantages of these new service delivery routes. Finally, *New Ways of Doing Business* explores what the editors call one of the most highly experimental policy arenas in government, that of the delivery of environmental programs. The authors of these articles explain via case study analysis many of the innovative programs currently in existence, and postulate that the traditional 'command-and-control' stance of government to businesses will be superseded by a flexibility that will allow for increased 'eco-efficiency' and attention to market-based regulatory tools.
