Each year, one out of every four hospital patients in the United States will be harmed by the care they receive. Over 400,000 will die as a result. Dr. Gretchen LeFever Watson's definitive guide empowers patients to be patient safety advocates. It takes a village to combat preventable errors and omissions that cause millions of deaths and sickness in our nation's hospitals and care facilities. Although most of these deaths are due to human and system errors—not faulty medical decisions or diagnoses—this annual death toll—as well as the millions of additional incidents of

survivable patient harm—could be cut in half through consistent use of simple and nearly cost-free safety behaviors. In *Your Patient Safety Survival Guide*, Gretchen LeFever Watson delivers a patient-centered blueprint on how to transform the patient-safety movement so that millions of unnecessary illnesses and deaths in hospitals, outpatient facilities, and nursing homes can be avoided. She provides key safety habits that people must learn to recognize so they can be sure hospital personnel use them during every patient encounter. She also explains how addressing the most common safety problems will set the stage for tackling a wide range of issues, including healthcare's role in the overuse of opiate painkillers and its related heroin epidemic. Watson's

support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or

cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User ' s Guide was created by researchers affiliated with AHRQ ' s Effective Health Care Program, particularly those who participated in AHRQ ' s DEcIDE (Developing Evidence to Inform Decisions About
