 The solution hasy 1 =y 2 =y/2. Substituting into the objective function yields c(y)=(y/2) 2 +(y/2) 2 =y 2 / 2. 5.2 The first-order conditions are 6y 1 =2y 2 ,ory 2 =3y 1 .Wealsorequire y 1 +y 2 =y. Solving these two equations in two unknowns yieldsy 1 =y/ 4 andy 2 =3y/4. The cost function is. c(y)= [y 4] 2 + [3 y 4] 2 = 3 y 2 4.

This book offers an opportunity for students to practise the art of problem-solving in economics on their own. It provides problems, hints, and full solutions.

Detailed answer keys to all 140 self-assessment exercises and solutions to the 173 odd-numbered end-of-chapter exercises in Intermediate Microeconomic Theory. This book accompanies Ana Espinola-Arredondo and Felix Muñoz-García's Intermediate Microeconomic Theory: Tools and Step-by-Step Examples, offering detailed answer keys to all 140 self-assessment exercises and solutions to the 173 odd-numbered end-of-chapter exercises. It provides readable step-by-step explanations and algebra support, enabling students to approach similar exercises on their own, emphasizing the economic intuition behind mathematical results.

These End of Chapter Exercises & Solutions are designed to accompany the Microeconomics: Markets, Methods & Models textbook by Douglas Curtis & Ian Irvine. The text and its supplements are supported by Lyryx Learning, offering editorial services to develop and adapt open content, formative online assessment, course supplements, and support to both the students and instructors.

This title shows how microeconomics should be used in the analysis of public policy problems. It is a way to learn microeconomics, motivated by its application to important, real-world issues.

Solutions and detailed explanations for odd-numbered end-of-chapter exercises (107 problems) in Felix Muñoz-García's Advanced Microeconomic Theory. Felix Muñoz-García's Advanced Microeconomic Theory provides examples and exercises that help students understand how to apply theoretical models and offers tools for approaching similar problems on their own. This workbook provides solutions and step-by-step explanations for the odd-numbered exercises (107 problems in total). The answer key and detailed explanations emphasize the economic intuition behind the mathematical assumptions and results and, in combination with the textbook, enable students to improve both their theoretical and practical preparation.

This second edition continues to present all the standard topics in microeconomics, with calculus, concisely, clearly and with a sense of humor.

This book contains the solutions to exercises in the Principles of Microeconomics textbook.

This book offers a concise introduction to the field of financial economics and presents, for the first time, recent behavioral finance research findings that help us to understand many puzzles in traditional finance. Tailor-made for master 's and PhD students, it includes tests and exercises that enable students to keep track of their progress. Parts of the book can also be used at the bachelor level.

Methods of Microeconomics: A Simple Introduction is an accessible guide to the mathematical methods of microeconomics. Worked examples are combined with exercises and solutions for readers, as economic relationships and equilibrium values are revealed and outcomes predicted. Consumer preferences and utility are examined with indifference curves, and differentiation to find marginal utility and the marginal rate of substitution. Consumer choice uses a Lagrange multiplier for optimization of utility functions subject to a budget constraint. Risk attitude and expected utility look at absolute and relative risk aversion measures, and apply risk averse, neutral or risk loving attitudes to find the expected utility linked with gambling or buying insurance. Production maximization optimizes production functions subject to cost constraints. Cost minimization optimizes cost functions subject to production constraints. Profit maximization with quadratic cost functions is performed for perfectly competitive or monopoly firms. Monopoly, monopolistically competitive, and oligopoly equilibrium values are calculated with optimization. The effects of asymmetric information are examined by comparing actual, equilibrium, and efficient outcomes for buyers and sellers.
