Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management opens with two essays on the biological basis of emotion/mental-driven body processes and disease. The

consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals, psychological counseling should be seen not only as a way to help patients cope, but possibly to influence the disease itself. A unique overview of a key area of cancer care, this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre-emptive therapies and decision-making in cancer therapy. A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping. The fourth section is an acknowledgement that patients with cancer live in a social context, which

often includes a partner and/or caregiver. The fifth section includes several essays on aspects and modalities of care-giving that are designed to help patients coping with their cancer and its aftermath, which increasingly extends for years. An important title covering key aspects of one of the most troubling disorders of our time, Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer.

Bipolar disorder is the most complex psychiatric disorder with different types of mood episodes, subtypes, varied

course, and significant co-morbidity. Not surprisingly, this complexity poses unique challenges to clinicians for optimal management of those with bipolar disorder. There has been an explosion of research into the causes and treatment of this condition over the past two decades. It is a daunting task for a practising clinician to make sense of this research and to remain up to date with progress in the understanding of the neurobiology and treatment of bipolar disorder. This book synthesizes and translates the vast array of research knowledge into information that is clinically relevant and meaningful for a clinician. The book provides a comprehensive, yet focused, reference work on bipolar disorder for both trainees and practising psychiatrists. The two editors are leaders in the field who

have published extensively on bipolar disorder. They have assembled a team of experts from around the world: in many instances, chapters are co-authored by people from different continents, bringing a truly international perspective to this important topic. The book covers the basic science of the pathology underlying bipolar disorder but addresses the clinical aspects of the disease throughout. The book comprises four sections: Descriptive Aspects—issues ranging from how the concept of bipolar disorder has evolved over the years to new information about neurocognitive impairment, creativity and economic productivity, and to discussion of the deliberations of the DSM-V committee on changes in diagnostic categories and criteria. Biology—the contribution of

genes to this disorder, changes in circadian rhythms, what we know about brain changes and the role of oxidative stress. Biological Treatment and Psychosocial Treatment— all the latest information about pharmacological and psychological treatments and the optimal management of this condition. If you want to provide state-of-the-art care to your bipolar patients, be sure to consult this authoritative reference.

Writing in an evocative, accessible, and concise manner, Veletsianos concretely demonstrates why it is so important to pay closer attention to the stories of students—who may have instructive and insightful ideas about the future of education.

Light therapy' is established worldwide

as the treatment of choice for seasonal affective disorder. It is also successfully used in nonseasonal depression, as well as for many other psychiatric and neurologic illnesses, and in sleep medicine. 'Wake therapy' is the fastest antidepressant known. Imaging studies show that both methods share neurobiological substrates with antidepressants, but act much faster. 'Chronotherapeutics' – the combination of light and wake therapy – achieves rapid results and, by reducing residual symptoms, also minimises relapse. Written by three prominent clinical and research experts in biological rhythms, this manual aims to broaden knowledge and practical application of these non-pharmacologic interventions for bipolar and unipolar disorders. Clinical understanding is deepened by an

explanation of the circadian timing system and sleep regulatory mechanisms which underlie the novel treatment strategy. The step-by-step guide and description of the interventions in centers throughout the world provides clear hands-on instructions, supported by a solid body of clinical research. The first edition of 'Chronotherapeutics for Affective Disorders' has kindled a network of psychiatrists and psychologists who are actively introducing these treatments for their inpatients and outpatients. This manual is also essential reading for primary care physicians, sleep medicine specialists and health care administrators.

The fourth edition of this popular

Handbook provides the latest guidance on prescribing and administering electroconvulsive therapy (ECT). Leading researchers and practitioners review new research on ECT and related treatments, including their efficacy in children and adolescents, and in those with bipolar disorder and neurological conditions. With a focus on safe provision and minimisation of side effects, it provides the reader with practical, evidence-based advice. The book has been substantially revised: references have been updated throughout; related treatment modalities such as rTMS, tCDS and ketamine are covered in greater depth; and current administrative and legal framework guidelines are clearly outlined. An essential reference manual for consultant and trainee clinical

psychiatrists, as well as ECT practitioners. This guide will benefit clinical teams looking after complex cases of depression, as well as those involved in the care of other people for whom ECT may be recommended.

nervous system and others. The opening chapters give some historical hints, explain the genetic basis of the disease and provide insights into the pathogenesis derived from recent experimental studies and guides the reader through classification and nomenclature. A large part of the book is then devoted to a detailed description of the specific related diseases and their clinical presentations, the disease course, and potential complications. The advice regarding treatment is based on the best currently available evidence in this constantly evolving area. The book is part of Springer's series Rare Diseases of the Immune System, which presents recently acquired knowledge on pathogenesis, diagnosis, and therapy with the aim of promoting a more holistic approach to
