Trade is a cornerstone concept in economics worldwide. This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research. In Advanced International Trade, Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and these materials are supplemented in each chapter by theoretical and empirical exercises. Feenstra explores a wealth of material, such as the Ricardian and Heckscher-Ohlin models, extensions to many goods and factors, and the role of tariffs, quotas, and other trade policies. He examines imperfect competition, offshoring, political economy, multinationals, endogenous growth, the gravity equation, and the organization of the firm in international trade. Feenstra also includes a new chapter on monopolistic competition with heterogeneous firms, with many applications of that model. In addition to known results, the book looks at some particularly important unpublished results by various authors. Two appendices draw on index numbers and discrete choice models to describe methods applicable to research problems in international trade. Completely revised with the latest developments and brand-new materials, Advanced International Trade is a classic textbook that will be used widely by students and practitioners of economics for a long time to come. Updated second edition of the essential graduate textbook Current approaches and a new chapter on monopolistic competition with heterogeneous firms Supplementary materials in each chapter Theoretical and empirical exercises Two appendices describe methods for international trade research

Developed in the classroom by two of the most prominent researchers in the field, Feenstra and Taylor's International Economics is a modern textbook for a modern audience, connecting theory to empirical evidence and expanding beyond the traditional focus on advanced companies to cover emerging markets and developing economies. International Trade is a split volume from the text, covering: • Offshoring of goods and services (Chapter 6) • Tariffs and quotas under imperfect competition (Chapter 9) • International agreements on trade, labor, and the environment (Chapter 11) As well as core topics: • The Ricardian model (Chapter 2) • The specific-factors model (Chapter 3) • The Heckscher-Ohlin model (Chapter 4) • Trade with increasing returns to scale and imperfect competition (Chapter 6) • Import tariffs and quotas under perfect competition (Chapter 8) • Export subsidies (Chapter 10)

Combining classic international economics with straight-from-the-headlines immediacy, Feenstra and Taylor's text seamlessly integrates the subject's established core content with new topic areas and new ideas that have emerged from recent empirical studies. Like no other textbook it brings cutting-edge theory, evidence, and policy analysis to the field of international economics. International Economics is available as a complete textbook or in two split volumes: International Trade and International Macroeconomics.

Developed in the classroom by two of the most prominent researchers in the field, Feenstra and Taylor's International Economics uses engaging applications to provide a modern view of the global economy for a modern audience. Most international economics textbooks emphasize theory and the economies of advanced countries. Feenstra and Taylor combine theoretical coverage with empirical evidence throughout, while reflecting the realities of the global economy by covering emerging markets and developing countries (India, China, Southeast Asia). The new edition has been thoroughly updated to include new data and Applications, as well as many new Headlines to reflect the rapid changes in international economics during the last three years. The 4th Edition includes the latest on opening relations with Cuba, immigration and Europe's refugee crisis, the effect of NAFTA on wages and employment, job polarization, quicksourcing, China's problems, and the debate in Britain about leaving the European Union. A modern textbook requires a modern and integrated homework system. LaunchPad offers our acclaimed content organized for easy assignability by instructors and enhanced learning for students.

This Guide to Trade Policy Analysis provides the main tools for the analysis of trade policy. Written by experts with practical experience in the field, this publication outlines the major concepts of trade policy analysis and contains practical guidance on how to apply them to concrete policy questions. The Guide has been developed to contribute to the enhancement of developing countries' capacity to analyse and implement trade policy. It is aimed at government experts engaged in trade negotiations, as well as students and researchers involved in trade-related study or research.

Every four years since 2004, the Copenhagen Consensus Center has organized and hosted a high profile thought experiment about how a hypothetical extra \$75 billion of development assistance money might best be spent to solve twelve of the major crises facing the world today. Collated in this specially commissioned book, a group of more than 50 experts make their cases for investment, discussing how to combat problems ranging from armed conflicts, corruption and trade barriers, to natural disasters, hunger, education and climate change. For each case, 'Alternative Perspectives' are also included to provide a critique and make other suggestions for investment. In addition, a panel of senior economists, including four Nobel Laureates, rank the attractiveness of each policy proposal in terms of its anticipated cost-benefit ratio. This thought-provoking book opens up debate, encouraging readers to come up with their own rankings and decide which solutions are smarter than others.

An *Advanced Guide to Trade Policy Analysis* provides the most recent tools for analysis of trade policy using structural gravity models.

This paper focuses on the sluggish growth of world trade relative to income growth in recent years. The analysis uses an empirical strategy based on an error correction model to assess whether the global trade slowdown is structural or cyclical. An estimate of the relationship between trade and income in the past four decades reveals that the long-term trade elasticity rose sharply in the 1990s, but declined significantly in the 2000s even before the global financial crisis. These results suggest that trade is growing slowly not only because of slow growth of Gross Domestic Product (GDP), but also because of a structural change in the trade-GDP relationship in recent years. The available evidence suggests that the explanation may lie in the slowing pace of international vertical specialization rather than increasing protection or the changing composition of trade and GDP.
