Building on the success of the first edition, this textbook takes a 'how, why, what' approach to financial accounting, interwoven in each chapter. From chapter one, students understand how financial information is prepared and presented, why it is prepared and presented in this way, and what the resulting financial information means for users. Designed for students taking a step beyond their introductory financial accounting training, the textbook equips them with all the key tools they will require when they enter professional practice. Reflective of the latest International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS), this textbook delivers concise, clear explanations of all the key issues in accounting standards that students need to know. Content maps to professional accounting body syllabi, making this the perfect choice for accounting courses which offer exemptions. Chapters are rich with 3 types of examples to enhance understanding: - Illustrative examples of real-world situations; - Worked examples demonstrating the calculation of figures required for financial statements; - Extracts from company annual reports demonstrate how the theory relates to financial reporting in practice. Financial Accounting: An Introduction presents an expansive and up-to-date treatment of an ever-important discipline. Without over-simplifying the subject, Augustine Benedict and Barry Elliott have created a progressive guide to financial accounting which tackles not only the fundamentals, but also includes coverage of new and emerging topics - chief among them IFRS. Comprehensive and rigorous, Financial Accounting encompasses a number of perspectives, ensuring that every aspect of each topic is examined in depth. Starting from the first concepts, the authors proceed to show how issues in financial accounting affect individuals, banking practices, sole traders, partnerships, and limited companies.

With interesting, real-world examples and conveyed in a student-friendly conversational writing style, the authors have developed a unique set of materials based directly on their collective years in the classroom. With frequent review exercises, highlighting of common mistakes, and integrating the course with a running continuing problem, this text offers a concise learning framework to show that accounting consists of three major processes: measuring, analyzing, and communicating. By tying each lesson into this framework, instructors can continue to improve student outcomes.
