This book chronicles the life of Keith Duckworth OBE, the remarkable engineer famous for being co-founder of Cosworth Engineering and creating the most successful F1 engine of all time, the DFV. Although the company's engines are given due prominence, this isn't an intricate technical examination of their design, but a more rounded look at the life and work of their designer – work which included significant contributions to aviation, motorcycling, and powerboating.

□ James Mattis, General, U.S. Marines (ret.) & 26th Secretary of Defense The Pulitzer Prize-winning journalist and #1 New York Times bestselling author offers a revelatory new book about the founding fathers, examining their educations and, in particular, their devotion to the ancient Greek and Roman classics□and how that influence would shape their ideals and the new American nation. On the morning after the 2016 presidential election, Thomas Ricks awoke with a few questions on his mind: What kind of nation did we now have? Is it what was designed or intended by the nation's founders? Trying to get as close to the source as he could, Ricks decided to go back and read the philosophy and literature

that shaped the founders' thinking, and the letters they wrote to each other debating these crucial works—among them the Iliad, Plutarch's Lives, and the works of Xenophon, Epicurus, Aristotle, Cato, and Cicero. For though much attention has been paid the influence of English political philosophers, like John Locke, closer to their own era, the founders were far more immersed in the literature of the ancient world. The first four American presidents came to their classical knowledge differently. Washington absorbed it mainly from the elite culture of his day; Adams from the laws and rhetoric of Rome; Jefferson immersed himself in classical philosophy, especially Epicureanism; and Madison, both a groundbreaking researcher and a deft politician, spent years studying the ancient world like a political scientist. Each of their

experiences, and distinctive learning, played an essential role in the formation of the United States. In examining how and what they studied, looking at them in the unusual light of the classical world, Ricks is able to draw arresting and fresh portraits of men we thought we knew. First Principles follows these four members of the Revolutionary generation from their youths to their adult lives, as they grappled with questions of independence, and forming and keeping a new nation. In doing so, Ricks interprets not only the effect of the ancient world on each man, and how that shaped our constitution and government, but offers startling new insights into these legendary leaders.

Clarence Thomas is one of the most vilified public figures of our day. Time magazine has called him "Uncle Tom Justice" and famed columnist Nat Hentoff accuses him of "having done more damage, more quickly, than any Supreme Court justice in history." What is perhaps most remarkable about Justice Thomas's Supreme Court tenure to date is that,

despite the fact that he will be influencing American law for generations to come, his legal philosophy has received only cursory treatment. Scott Douglas Gerber seeks to remedy this state of affairs by casting aside facile, visceral assessments of Thomas - from both the left and the right. Gerber takes on the formidable task of providing a portrait of Thomas based not on the justice's caricatured reputation but on his judicial opinions and votes, his scholarly writings, and his public speeches.

This book tells the story of the modern car industry from the inside. What is it really like to work for the carmakers - the industrial giants that influence the daily lives of millions? How are mass-production cars really designed, engineered, and

manufactured? What does it take to engineer a successful vehicle? The story is told through the author's own journey around the globe – starting as a young graduate engineer working for Nissan in the UK, to working for Nissan in Japan and, finally, for Renault in France as Chief Engineer of its ‘halo’ sports-car, designed to relaunch the Alpine brand. It tells the behind-the-scenes story of three well-known vehicles, whose development teams were led by the author – the Nissan Qashqai, the Renault ZOE, and the Alpine A110 – revealing some of the fascinating stories of how these vehicles came into being. The book seeks to show the real work that goes on behind the glamour of the Motor Shows and the well-honed corporate press releases – work that is sometimes exciting, but often grindingly difficult.
