Provides a comprehensive and up-to-date review of the development of the science behind the psychology of false confessions Four decades ago, little was known or understood about false confessions and the reasons behind them. So much has changed since then due in part to the diligent work done by Gisli H. Gudjonsson. This eye-opening book by the Icelandic/British clinical forensic psychologist, who in the mid 1970s had worked as detective in Reykjavik, offers a complete and current analysis of how the study of the psychology of false confessions came about, including the relevant theories and empirical/experimental evidence base. It also provides a reflective review of the gradual development of the science and how it can be applied to real life cases. Based on Gudjonsson’s personal account of the biggest murder investigations in Iceland’s history, as well as other landmark cases, The Psychology of False Confessions: Forty Years of Science and Practice takes readers inside the minds of those who sit on both sides of the interrogation table to examine why confessions to crimes occur even when the confessor is innocent. Presented in three parts, the book covers how the science of studying false confessions emerged and grew to become a regular field of practice. It then goes deep into the investigation of the mid-1970s assumed murders of two men in Iceland and the people held responsible for them. It finishes with an in-depth psychological analysis of the confessions of the six people convicted. Written by an expert extensively involved in the development of the science and its application to real life cases Covers the most sensational murder cases in Iceland’s history Deep analysis of the “Reykjavik Confessions” adds crucial evidence to understanding how and why coerced-internalized false confessions occur, and their detrimental and lasting effects on memory The Psychology of False Confessions: Forty Years of Science and Practice is an important source book for students, academics, criminologists, and clinical, forensic, and social psychologists and psychiatrists.

An authoritative review of foundational research in criminal justice. Forty Studies that Changed Criminal Justice, 2e presents a thorough yet concise summary of the major and influential research studies in the field of criminal justice. Knowledge in criminal justice is developed with research, yet introductory textbooks fail to offer more than cursory synopses of the significant empirical studies that established the foundation of the discipline. This book provides a rich understanding of important research published in each of the three general areas of criminal justice: policing, courts, and corrections. More than a just collection of original published articles, the text is a summary of studies that have shaped the criminal justice system.

Essential reading for all students of philosophy of mind, science and psychology, The Routledge Companion to Philosophy of Psychology will also be of interest to anyone studying psychology and its related disciplines.

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of When: The Scientific Secrets of Perfect Timing Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That’s a mistake, says Daniel H. Pink (author of To Sell Is Human: The Surprising Truth About Motivating Others). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Third edition of leading textbook offering an advanced overview of all major perspectives of research in cross-cultural psychology.
