Esta nova edição continua a adotar o tema 'antienciclopédia'. Entretanto, esta edição aparece um pouco maior, pois apresenta duas características novas - um capítulo sobre genômica, bioinformática e proteômica (Capítulo 13), que explica a crescente importância do estudo de informações da sequência de nucleotídeos para a compreensão do funcionamento celular, e um Adendo, que oferece aos iniciantes uma visão do âmbito da pesquisa de biologia molecular. Por outro lado, o modo sucinto das edições anteriores foi mantido. Para acentuar as características de facilidade das edições anteriores, esta edição foi amplamente editada por estudantes de graduação. Conteúdo - A Estrutura das Proteínas, Ácidos Nucleicos e Complexos Macromoleculares; Função Macromolecular; Coordenação da Função Macromolecular nas Células; Manipulação Experimental de Macromoléculas; Adendo para sua Revisão de Biologia Molecular; Apêndice - Fundamentos Químicos Importantes para Compreender Biologia Molecular.

The third edition of this text is completely reorganized to reflect new discoveries, emphases and approaches. It covers advances in signal transduction, intracellular protein sorting, and gene regulation; it also adds two new chapters on recombinant DNA techniques and proteins as machines.

This resource distills the most essential information on human embryology and teratology from 'The Developing Human: Clinically Oriented Embryology', 7th Edition, presenting the crucial clinical and scientific concepts of the subject in an easy-to-use format.

This book reviews soil biodiversity and related ecological processes in one of the key biodiversity hotspots of the world, the Amazon, and nearby regions of Brazil. It covers both the tropical savannah and rainforests. Chapters describe the biology, ecology, taxonomy, geographic distribution and sampling methods for the most important soil functional groups. The book is based on a project "Conservation and Sustainable Management of Below-Ground Biodiversity", executed by TSBF-CIAT with co-financing from the Global Environment Facility (GEF) and implementation support from the United Nations Environment Programme (UNEP).

This is an introductory text on Biophysics meant for undergraduate students of our universities and technical institutions. The first part deals with organ systems and describes the principles of physics in the processes of locomotion, blood and fluid flow, respiration, audition and vision. The second part deals with cellular and molecular biophysics and covers, in depth, molecular forces and structure of bio molecules, dynamics of biomembranes, near-equilibrium thermodynamics, photosynthesis and cellular respiration, nerve excitation, etc. In the second edition, we have further added a discussion on nano-bio-machines and on medical imaging (CT-SCAN and MRI). The book is designed in such a way that it can be used by both Mathematics and Biology groups. NEW TO THE SECOND EDITION: Chapters on: \* Physics of Nano-biomachines \* Medical Imaging

Presents evidence that S/T/S is a successful reform movement in science education.

Mark Ridley's Evolution has become the premier undergraduate text in the study of evolution. Readable and stimulating, yet well-balanced and in-depth, this text tells the story of evolution, from the history of the study to the most revent developments in evolutionary theory. The third edition of this successful textbook features updates and extensive new coverage. The sections on adaptation and diversity have been reorganized for improved clarity and flow, and a completely updated section on the evolution of sex and the inclusion of more plant examples have all helped to shape this new edition. Evolution also features strong, balanced coverage of population genetics, and scores of new applied plant and animal examples make this edition even more accessible and engaging. Dedicated website - provides an interactive experience of the book, with illustrations downloadable to PowerPoint, and a full supplemental package complementing the book - www.blackwellpublishing.com/ridley. Margin icons - indicate where there is relevant information included in the dedicated website. Two new chapters - one on evolutionary genomics and one on evolution and development bring state-of-the-art information to the coverage of evolutionary study. Two kinds of boxes - one featuring practical applications and the other related information, supply added depth without interrupting the flow of the text. Margin comments - paraphrase and highlight key concepts. Study and review questions - help students review their understanding at the end of each chapter, while new challenge questions prompt students to synthesize the chapter concepts to reinforce the learning at a deeper level.

Examines the workings of nature's mechanical designs and man's technology and compares the design similarities and differences of both human and natural technologies.
