Research centering on blood flow in the heart continues to hold an important position, especially since a better understanding of the subject may help reduce the incidence of coronary arterial disease and heart attacks. This book summarizes recent advances in the field; it is the product of fruitful cooperation among international scientists who met in Japan in May, 1990 to discuss the regulation of coronary blood flow.

Volume for 1975 contains entries for advise and appeals memoranda issued from July 1, 1967 to Dec. 31, 1975; volumes for 1976- are issued as cumulative supplements to the basic 1975 volume.
