Examples and exercises on Pareto efficiency Example Consider an economy that contains only one good, which everyone likes. Then every allocation is Pareto efficient: the only way to make someone better off is to give them more of the good, in which case someone else will have less of the good, and hence be worse off. Example An economy contains two people and two goods, apples and bananas.

The General Pareto Distribution As with many other distributions, the Pareto distribution is often generalized by adding a scale parameter. Thus, suppose that  $Z$  has the basic Pareto distribution with shape parameter  $a$ . If  $b > 0$ , the random variable  $X = bZ$  has the Pareto distribution with shape parameter  $a$  and scale parameter  $b$ .
