Noel Gaston and Ahmed M. Khalid's volume offers fascinating insights on the development, causes, and consequences of globalization in the Asia-Pacific. The outstanding collection of chapters combines theory with rigorous econometrics, making the book a must-read for every student of globalization. At a time where the global crisis gave new arguments to the critics of globalization, the questions raised in this book, and the answers given, are essential reading for academics and politicians alike. Axel Dreher, University of Goettingen, Germany Given the importance of globalization in today's world, this salutary and timely book explores how globalization is specifically shaping the Asia-Pacific. It investigates future prospects and challenges, identifies the key winners and losers, and concludes in many cases that the portents for globalization are not particularly promising. Prominent economists and policy scholars examine a wide range of topics pertinent to globalization and economic integration in the Asia-Pacific, encompassing macroeconomic coordination and financial market integration; regionalism and preferential trade agreements; and immigration and labor markets, including gender issues and the impact of outsourcing. Through these analyses, the expert contributors illustrate the importance of market participants and regulators clearly understanding the risks associated with the present stage of globalization. They show that national policy makers need to reconfigure the regulatory framework following international lessons from previous financial crises experienced in the last two decades, and that financial literacy is essential for market participants, especially in emerging economies. Many of the issues discussed will prove useful in promoting the development of a new international financial architecture, comprising measures that will help reap the full benefits of globalization. This stimulating and challenging book will strongly appeal to academics, advanced undergraduates, postgraduates, researchers, and policy makers in the fields of Asian studies, international economics, and international business.

Over the past two decades, the percentage of the world's population living on less than a dollar a day has been cut in half. How much of that improvement is because of—or in spite of—globalization? While anti-globalization activists mount loud critiques and the media report breathlessly on globalization's perils and promises, economists have largely remained silent, in part because of an entrenched institutional divide between those who study poverty and those who study trade and finance. Globalization and Poverty bridges that gap, bringing together experts on both international trade and poverty to provide a detailed view of the effects of globalization on the poor in developing nations, answering such questions as: Do lower import tariffs improve the lives of the poor? Has increased financial integration led to more or less poverty? How have the poor fared during various currency crises? Does food aid hurt or help the poor? Poverty, the contributors show here, has been used as a popular and convenient catchphrase by parties on both sides of the globalization debate to further their respective arguments. Globalization and Poverty provides the more nuanced understanding necessary to move that debate beyond the slogans.

Contemporary Economic Sociology closely examines critical and contemporary issues in the sociology of economic life. Bringing together a range of theoretical perspectives, Fran Tonkiss examines major shifts in the organization of economy and society - from the politics of globalization to the cultural economy, social exclusion and the 'end' of class. This new volume is organized around three core themes (globalization, production and inequality) and answers the questions: how are transnational processes re-making contemporary economies? can capitalist globalization be governed or resisted? do class relations still shape people's social identities? how can we think about inequality in national and international contexts? Key changes in each of these domains raise new challenges for analyzing social and economic relations, power, agency and identity. Setting these changes in a transnational context, this book examines how these issues are being re-shaped in contemporary societies, and explores competing frameworks for understanding such changes. Drawing on arguments from economic sociology, politics and policy studies, political economy and critical geography, the text focuses on both conceptual approaches to the social study of the economy, and trans-national processes of social and economic restructuring. The arguments provide a critical overview of current concerns for economic sociology, and extend the boundaries of the discipline to a new set of questions. The text is particularly relevant to undergraduate and graduate students and scholars in the fields of economic and political sociology, politics and government, geography, economics and international relations.

It is a cliché to say that we live in a globalized world in which investment flows, communications and the operations of multinationals from all parts of the world have changed the character of the international business environment. But the easy concept of globalization poses as many questions as it answers and it is the purpose of this book to address these challenges. In Governments, Globalization, and International Business a prestigious group of international scholars explore in detail the consequences of globalization defined as the deepening structural interdependence of the world economy. In Part 1 John Dunning, Richard Lipsey, Susan Strange and Stephen Kobrin analyse these changes from different disciplinary perspectives and intellectual backgrounds. The basic question they address is what are the consequences of globalization on the nature, form, and level of domestic economic activity? In doing so, they also consider the increasing mobility of knowledge and information, the role of international corporations, and the sovereignty of the nation state in the modern borderless world. In Part 2 the different experiences and policies of a number of economies are assessed in a series of country studies. These include the G7 countries as well as the developing East Asian economies, Latin America and smaller developed countries. In the final part John Stopford and Edward Graham stand back and look at the changing role of National and Supranational governance. In doing so they underscore a fundamental tenet of the volume, that globalization requires national governments to re-evaluate various factors of their systemic governance. Yet despite apparently convergent trends they argue there are no universal prescriptions for the way governments should respond to globalization, and the policy challenge is a more complex one than merely more or less government.
