Focuses on the first control systems course of BTech, JNTU, this book helps the student prepare for further studies in modern control system design. It offers a profusion of examples on various aspects of study.

About the book... The book provides an integrated treatment of continuous-time and discrete-time systems for two courses at postgraduate level, or one course at undergraduate and one course at postgraduate level. It covers mainly two areas of modern control theory, namely; system theory, and multivariable and optimal control. The coverage of the former is quite exhaustive while that of latter is adequate with significant provision of the necessary topics that enables a research student to comprehend various technical papers. The stress is on interdisciplinary nature of the subject. Practical control problems from various engineering disciplines have been drawn to

illustrate the potential concepts. Most of the theoretical results have been presented in a manner suitable for digital computer programming along with the necessary algorithms for numerical computations.

Test Prep for Control Systems–GATE, PSUS AND ES Examination

Signal processing in digital control - Models of digital control devices and systems - Design of digital control algorithms - Control system analysis using state variable methods - Variable analysis of digital control systems - Pole-placement design and state observers - Lyapunov stability analysis - Linear quadratic optimal control - Nonlinear control systems - Neural networks for control - Fuzzy control.

This volume brings out recent developments and current activity in different areas of operational research. The topics covered include the following major areas:
