Gynecological Tumor Board is a comprehensive reference on clinical management of reproductive system cancers in women. Twenty nationally recognized leaders in the field of Gynecologic Oncology present cases—from diagnosis through medical/surgical treatment through QOL and long-term care—that reflect the clinical scenarios often found in a Gynecologic Oncology clinic, and present the best current guidelines for treating these conditions. Special Editors' Comments provide expert analysis and counterpoint to the cases.

Mozambique has a high prevalence of gynecologic cancers .Does not have a trained gynecologic oncologist or a formal training program in gynecologic oncology. There are challenges associated with building a new training program in this setting. The International Gynecologic Cancer Society (IGCS) Gynecologic Oncology Global Curriculum & Mentorship Program is a two-year training program to train gynecologists in gynecologic oncology in countries without a formal training program. Training includes self-study, assessments, regular in-country surgical training with IGCS international mentors who travel from Brazil and the US. The program uses the Project ECHO (Extension for Community HealthCare Outcomes), telementoring model for multidisciplinary monthly tumor boards. Fellows present cases and discuss management with international mentors, and receive didactic lectures and record clinical cases in REDCap, a web database application. The Mozambican fellows also travel to Brazil to learn best practices for diagnosis, and management of women with gynecologic cancers in different resource settings. Prior to this program there were limited options for surgical treatment of women with gynecologic tumors in Mozambique. Developing support and resources for a new training program in a busy hospital requires that fellows and mentors clearly explain the program and provide regular updates to supervisors, hospital and Ministry of Health leadership. The program should not adversely impact other hospital services. A senior gynecology faculty member serves as the local mentor and the three fellows in Mozambique developed strategies to work together, particularly in the operating room, to support each other. The international mentors has travelled to Mozambique 9 times and the fellows has travelled 2 times to Brazil. The training model is multidisciplinary, and it took time to engage other specialties in the patient care. The program, initiated in 2017, has matured as administrative and resource challenges have been successfully met. In February 2020 the 3 fellows are expected to complete their training and become the first gynecologic oncologist of Mozambique. This program offers a unique opportunity to build a specialty training program with support from an international society and experienced clinicians and lays the foundation to develop a training program in Mozambique. Knowledge, surgical skills and patient care has improved. Patients with gynecologic cancers can now receive appropriate care locally, including surgery.

Tumor Board Reviews provides comprehensive coverage of all topics in oncology. Each of the 32 chapters focuses on a specific major disease. A brief overview of epidemiology and risk factors is followed by a sequence of specific presentations organized by tumors stage or disease classification. Each discussion features a case presentation that mimics the format of a tumor board presentation and thus illustrates key diagnostic and management decisions. There is also a discussion of the evidence that supports the clinical management decisions taken in the case, based on current expert panel guidelines. Algorithms and decision tree graphics are used extensively to provide visual support of the decision process. The combination of case presentations and evidence-based management discussions make this volume a unique tool for keeping current with clinical guidelines and provides the reader with a clear understanding of applications of new information for use in daily practice.

Objectives: Women in low- and middle-income countries (LMICs) have higher rates of cervical cancer and comparable rates of other gynecologic cancers when compared to women in high-income countries, yet the majority of LMICs have few gynecologic oncologists and lack formal training programs. The management of gynecologic cancers must be adapted to available resources and to potential differences in disease presentation and biology in LMICs. Methods: We developed an adaptable but universal curriculum for training in low resource settings. We supported collaborations between high- or middle-income country academic gynecologic oncologists and local mentors and trainees to either launch or strengthen formal gynecologic oncology fellowships. Milestones include: progression through the curriculum, clinical training with local and international mentors, regular Project ECHO tumor boards, logging of cases and educational activities, and observerships at the international mentor's institution. Trainees sit for a final examination; those who pass are awarded a certificate of completion from IGCS. Results: In 2019, IGCS is supporting 12 collaborative fellowships. Thirty fellows are in training, supported by 35 international mentors and 24 local mentors, and they have logged 1758 surgical procedures to date. Four major textbooks and the ACOG Prolog series have been donated to fellows. Forty-seven Project ECHO tumor boards were held in 2018; to date IGCS members have volunteered over 1500 hours to ECHO Tumor Boards for fellow training. Fellows have traveled to host institutions in North America, Europe and Asia, and have attended international professional society meetings. Conclusions: The IGCS Global Curriculum is a novel model of sustained collaboration yielding academic quality, sub-specialty surgical training in resource limited settings.

Tumor Board Review utilizes the knowledge and expertise of oncology specialists to enhance learning the practice of oncology. Each of the 32 chapters follows a uniform format: a concise summary of the epidemiology, risk factors, natural history, and pathology of each major organ-specific tumor type; an abbreviated display of the relevant staging (generally based on the American Joint Commission on Cancer [AJCC] Staging, 7th Edition); and several illustrative patient case summaries (representative of major stage categories of each tumor), each followed by an evidence-based case discussion which reviews the current guidelines and rationale for the diagnostic and therapeutic steps taken. Algorithms and decision tree graphics are used extensively to provide visual support of the decision process. The combination of case presentations and evidence-based management discussions make this volume a unique tool for keeping current with clinical guidelines and provides the reader with a clear understanding of applications of new information for use in daily practice. The case presentations and authoritative discussions make Tumor Board Review a valuable resource for board study and self-assessment. Features of Tumor Board Review Include: Comprehensive coverage of all areas of oncology Presentation of most recent guidelines and management standards in concise, user-friendly format In-depth "tumor board" presentations showing clear clinical applications Special focus on indications and use of new drugs, and treatment of new side effects Extensive use of algorithms Color atlas section of pathology photomicrographs

Written by two expert oncologists, specializing in female cancers, Dx/Rx: Gynecologic Cancer is a perfect pocket reference for all professionals involved in the care of women with gynecologic cancer. This handy, 136-page book provides comprehensive, up-to-date information on the epidemiology, symptoms, diagnosis, and management of malignancies of the ovaries, cervix, uterus, and fallopian tubes. Topics include a review of gynecologic tumors, detailed analysis on treatment strategies, and a discussion of past and current literature that has shaped the field. Presented in a concise, quick-reference format, Dx/Rx: Gynecologic Cancer is an essential guide for the care of women with malignancies of the reproductive system.

This practical reference book provides up-to-date, evidence-based multidisciplinary guidelines on the epidemiology, biology, diagnosis, and treatment of endometrial cancer. Individual chapters focus on topics such as hormonal interactions, cancer prevention, genetic classification and its clinical applications. Recent advances in diagnostic methods are described. The treatment-oriented chapters include coverage of the roles of lymphadenectomy and sentinel node dissection, surgical complications, radiation techniques, and chemotherapy in early-stage disease. Treatment options in advanced disease, including hormonal therapy and targeted therapy, are considered separately, as is the management of rare tumor types. The authors are international key opinion leaders. Summaries of the ESMO/ESGO/ESTRO guidelines on management are included. Each clinical chapter ends with a summary of recommendations with the level of evidence.

This book explains how telemedicine can offer solutions capable of improving the care and survival rates of cancer patients and can also help patients to live a normal life in spite of their condition. Different fields of application — community, hospital and home based — are examined, and detailed attention is paid to the use of tele-oncology in rural/extreme rural settings and in developing countries. The impact of new technologies and the opportunities afforded by the social web are both discussed. The concluding chapters consider eLearning in relation to cancer care and assess the scope for education to improve prevention. No medical condition can shatter people ' s lives as cancer does today and the need to develop strategies to reduce the disease burden and improve quality of life is paramount. Readers will find this new volume in Springer ' s TELe Health series to be a rich source of information on the important contribution that can be made by telemedicine in achieving these goals.

## Get Free Gynecologic Tumor Board Clinical Cases In Diagnosis And Management Of Cancer Of The Female Reproductive System

Gynecologic cancer includes cancer of the female lower genital tract: vagina, vulva, cervix, endometrium, uterus, and ovaries. Gynecologic Cancer is the fourth volume in the M.D. Anderson Cancer Care Series, featuring the current standard approach to gynecologic cancer care from the experts at M.D. Anderson Cancer Center. Designed for the practicing oncologist, this clinical guidebook allows for quick, authoritative access to the latest and best multimodality therapies. Topics covered in this volume include primary prevention and early detection, preinvasive diseases of female lower genital tract, pathology and imaging of gynecologica malignancies, treatment of vaginal, cervical, endometrial, uterine cancers. Discussions also address fertility-sparing options for treatment of women with gynecologica cancers as well as sexuality in women with gyn malignancies. Each of the 20 chapters ends with an up-to-date list of suggested readings, as well as "key practice points" highlighting the most principles and practices of each chapter for at-a-glance reference. More than 80 illustrations complement the text. This thorough, practical volume is the essential clinical guide for the oncologists, surgeons, and all physicians involved in the care of patients with gynecologic cancer.

In an era of promising advances in cancer research, there are considerable and even alarming gaps in the fundamental knowledge and understanding of ovarian cancer. Researchers now know that ovarian cancer is not a single disease-several distinct subtypes exist with different origins, risk factors, genetic mutations, biological behaviors, and prognoses. However, persistent questions have impeded progress toward improving the prevention, early detection, treatment, and management of ovarian cancers. Failure to significantly improve morbidity and mortality during the past several decades is likely due to several factors, including the lack of research being performed by specific disease subtype, lack of definitive knowledge of the cell of origin and disease progression, and incomplete understanding of genetic and non-genetic risk factors. Ovarian Cancers examines the state of the science in ovarian cancer research, identifies key gaps in the evidence base and the challenges to addressing those gaps, considers opportunities for advancing ovarian cancer research, and examines avenues for translation and dissemination of new findings and communication of new information to patients and others. This study makes recommendations for public- and private-sector efforts that could facilitate progress in reducing the incidence of morbidity and mortality from ovarian cancers.
