The work of Herman Hertzberger is the subject of wide international esteem. 1991 first saw publication of Hertzberger's *Lessons for Students in Architecture*, an elaborated version of lectures he had given since 1973 at Delft University of Technology. This very successful book has gone through many reprints and has also been published in Japanese, German, Italian, Portuguese, Taiwanese, Dutch, Greek, Polish, Iranian, Korean and Chinese. *Space and the Architect* is the second book written by Hertzberger. It charts the backgrounds to his work of recent years and the ideas informing it, drawing on a wide spectrum of subjects and designs by artists, precursors, past masters and colleagues, though with his own work persistently present as a reference. Space is its principal theme, physical space but also the mental or intellectual regions the architect calls upon during the process of designing.

Bewerkte compilatie van de stof behandeld in de colleges van de architect aan de Technische Universiteit Delft.

“ A welcome and timely addition to the subject of school design at a time of great change. ” —Professor Alan Jones, President of the Royal Institute of British Architects “ Comprehensive but also very practical approach. ” —Andreas Schleicher, Director for the Directorate of Education and Skills in Paris, France “ Any community building a new school should read this book. ” —Michael B. Horn, Clayton Christensen Institute for Disruptive Innovation in Boston, USA “ Builds a bridge from the simple to the extraordinary... awash in opportunity and inspiration. ” —Professor Stephen Heppell, Chair in Learning Innovation at the Universidad Camilo Jose Cela in Madrid, Spain Can school design help us to realize a new vision for education that equips young people for life in a fast-changing world? This is the big question at the heart of *Planning Learning Spaces*, a new guide for anyone involved in the

planning and design of learning environments. Murray Hudson and Terry White have brought together educators and innovative school architects to pool their collective expertise and inspire the design of more intelligent learning spaces. The authors prompt readers to question common assumptions about how schools should look and how children should be educated:

- Why have so many schools changed relatively little in more than a century?
- What form should a school library take in the Internet age?
- Do classrooms really have to be square?

The book also tackles vital elements of learning space design such as the right lighting, heating and acoustics, and explores the key role of furniture, fixtures, and fittings. With contributions from leading professionals around the world, including Herman Hertzberger and Sir Ken Robinson, *Planning Learning Spaces* is an invaluable resource for architects, interior designers, and educators hoping that their project will make a genuine difference. Highly recommended reading for anyone involved with the process of building or updating an educational space.

Architect and architectural author Herman Hertzberger (1932) is internationally recognized for both his built work and his written work. Buildings such as *Centraal Beheer* in Apeldoorn (1972) and many of Apeldoorn's schools, but also his publications, such as *Lessons for Students in Architecture* (which has been translated into many languages) have inspired generations of architects and students. In this book, Hertzberger lays down the foundations of his architectural vision. 'This book is an attempt to formulate what structuralism means in architecture, and why that matters. There are many misunderstandings about the concept of structuralism in general, and especially where architecture is concerned. There is also a renewed interest in structuralism. What I see as the real structuralism in architecture is a way of thinking that has far-reaching opportunities for the reuse of buildings, which can give a new impulse to the discussion about sustainability. In addition, the possibility of users having a greater influence has

revealed the blueprint for a more democratic architecture. - Herman Hertzberger, Exhibition: The New Institute, Rotterdam, The Netherlands (20.09.2014-January 2015).--Provided by publisher.

Schools crops up often in Hertzberger's prodigious oeuvre. They are his favourite buildings, he says. Hertzberger designs schools that are to function like cities. Schools and cities, he contends, can be read in many ways and are challenging, inspirational and inviting. School is where you can withdraw and adopt a position with respect to others, where you learn to take a place in society. Besides a presentation of Hertzberger's thirty-plus built schools and a number of unbuilt ones, the sociologist Abram de Swaan addresses Hertzberger's work in an essay. Aided by examples, he examines how school architecture and the way school buildings are organized impacts the social development of children. De Swaan pays tribute to Hertzberger as a pre-eminently 'sociological' architect.

Introduces key issues in the design of learning spaces with case studies and guidance on refurbishment and new building projects

This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community. Innovations in both design and construction processes are then analyzed, paying special attention to the

# Acces PDF Herman Hertzberger Space And Learning

Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

Processes of Creating Space is a workbook for beginning designers that shows how to generate space with user experiences in mind. It explains how to keenly perceive your world and seamlessly integrate architectural representation into your design process. The book uses two main strategies, blending the design process with material processes and media techniques and ‘ experiential typologies ’ - emphasising first-hand experience of space. Five highly experimental assignments explore the interwoven relationship between design process and design tools, to help you learn when to incorporate writing, architectural photography, macro photography, orthographic projection, perspective projection, hand-drawing, CAD, mass modelling, hot wire foam cutting, 3D modelling, multi-part plaster mold making, slip casting, plaster casting, paper casting, monocoque shell structures, working with latex, concrete, twine pulp, full-scale prototyping and more. Illustrated with more than 350 color images, the book also includes a section on material fabrication techniques and a glossary of technical terms.
