I have tutored many,
many people in Math
through Calculus, and
I have found that if
you start off with the
basics and take things

Specifically designed for California students and teachers. The California Mathematics Content Standards are

Get Free Holt California

unpacking, taught, and then reinforced throughout our program so that teachers can plan, diagnose, teach, assess, and intervene with the standards in mind.

Useful to researchers as well as practitioners looking for guidance on

Get Free Holt California

designing automated instruction systems, this book provides a snapshot of the state-of-the-art in this research area. In so doing, it focuses on the two critical problems: first, diagnosis of the student's current level of understanding or performance; and second, selection of

Get Free Holt California

the appropriate
intervention that will
transition the student
toward expert
performance.

Containing a
comprehensive set of
principled approaches
to automated
instruction, diagnosis,
and remediation, it is
the first volume on the
topic to provide
specific, detailed

Get Free Holt California

guidance on how to develop these systems. Leading researchers and practitioners represented in this book address the following questions in each chapter: * What is your approach to cognitive diagnosis for automated instruction? * What is the theoretical basis

Get Free Holt California

of your approach? *

What data support the
utility of the

approach? * What is
the range of

applicability of your
approach? * What

knowledge

engineering or task
analysis methods are
required to support
your approach?

Referring to

automated instruction

Get Free Holt California

as instruction that is delivered on any microprocessor-based system, the

contributors to -- and editors of -- this book believe that is it possible for automated instructional systems to be more effective than they currently are. Specifically, they argue that by using

Get Free Holt California

artificial intelligence programming techniques, it is possible for automated instructional systems to emulate the desirable properties of human tutors in one-on-one instruction.
