The development of knowledge-based

Download File PDF Holt Chemistry Stoichiometry Problem Solving Answers

systems is usually approached through the combined skills of knowledge engineers (KEs) and subject matter experts (SMEs). One of the most critical steps in this activity aims at transferring knowledge from SMEs to formal, machine-readable representations, which allow systems

Download File PDF Holt Chemistry Stoichiometry Problem Solving Answers

to reason with such knowledge. However, this is a costly and error prone task. Alleviating the knowledge acquisition bottleneck requires enabling SMEs with the means to produce the desired knowledge representations without the help of KEs. This is especially difficult in the

Download File PDF Holt Chemistry Stoichiometry

Problem Solving Answers

case of complex knowledge types, like processes. The analysis of different application domains uncovers that process knowledge is one of the most frequent knowledge types, whose complexity requires specific means to enable SMEs to represent processes in a computational form. Additionally,

Download File PDF Holt Chemistry Stoichiometry

Problem Solving Answers
such complexity and the increasingly large amount of data that process executions generate in knowledge-intensive domains, like Biology or Astronomy, requires analytical means with high abstraction capabilities to support SMEs in the analysis of such processes. This book presents

Download File PDF Holt Chemistry Stoichiometry

Problem Solving Methods
methods and tools that enable SMEs to acquire process knowledge from the domains, formally represent such knowledge, reason about it, and understand process executions by analyzing their provenance. We describe the utilization of Problem Solving Methods as the main

Download File PDF Holt Chemistry Stoichiometry Problem Solving Answers

Knowledge artifacts for process acquisition and analysis in two innovative ways. First, as formalizations of the reasoning strategies needed for processes and, second, as high-level, domain-independent, and reusable abstractions of process knowledge to
