Special Education law is confusing to parents, educators, advocates, and most attorneys. Wrightslaw: Special Education Law, 2nd Edition provides a clear roadmap to the laws and how to get better services for all children with disabilities. Wrightslaw: Special Education Law, 2nd Edition is an invaluable resource for parents, advocates, educators, and attorneys. you will refer to this book again and again.

Unlike the vast majority of books on the market today, Sized to Fit is written for teachers who are not equipped to meet the needs of struggling students. Sized to Fit is not a resource manual nor a work of fiction, but a record of classroom observations and clinical trials that illustrate teaching methods that work for all students. Its style of writing is intended to be relaxed and personal. This book's dissimilarity to others provides solutions to problems rather than only identifying the need for reform. Part I pokes fun at the teaching profession because there is a positive link between humor and health, and Part II explains the disparity between contemporary students and outdated teaching methods. Part III describes how to get students' attention and how to keep it, and "Reading Rules" is a gift to all teachers, homeschoolers, and struggling readers.

The Resilience Formula is a plan for proactive parenting- parenting that actively considers how to teach resilience to children through everyday challenges. Many parenting books tell us what makes a good parent. It is not easy, however, to find information about how to be that type of parent, particularly when strong emotions come into play. In this book, we provide: 1- A FRAMEWORK for handling challenges, big and small; 2- LESSONS about how to script language to make your child more independent; and 3- A PLAN to help you transform challenges into opportunities to teach resilience.

Previous edition written by: James A. McLoughlin, Rena B. Lewis.

Many teachers in regular classrooms feel unprepared to teach students with learning disabilities. Fortunately, brain research has confirmed that strategies benefiting learners with special challenges are suited for engaging and stimulating all learners. In this book, neurologist and classroom teacher Judy Willis explains that we can best help students by putting in place strategies, accommodations, and interventions that provide developmentally and academically appropriate challenges to suit the needs, gifts, and goals of each student. Brain-Friendly Strategies for the Inclusion Classroom will help teachers * Understand how the brain learns and the technologies that reveal this process. * Implement strategies that are compatible with students' individual learning styles and honor their multiple intelligences. * Improve the focus of students with attention disorders and help them gain the confidence and skills they need to develop goal-oriented behaviors. * Create an enriching learning environment by incorporating student-centered activities, discovery and hands-on learning experiences, cross-curricular learning, and multisensory lessons. * Implement strategic review, study, and test preparation strategies that will allow students to retain information and connect it with future learning. * Build safe, supportive classroom communities and raise class awareness and empathy for students with learning disabilities. It's time for teachers to lower the barriers, not the bar. Using strategies that align with research on how people's brains function, teachers can engage all students as individuals and help them reach their maximum potential with joy and confidence.

Offers parents of special needs children information on how best to advocate for their child.

In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In Educating One and All, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"--the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. Educating One and All examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilities--and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.

Explains how to encourage and support teachers who are striving to match their instructional approaches to the needs and interests of every student.

"Clearly written and well organized, this book shows how to apply the principles of universal design for learning (UDL) across all subject areas and grade levels. The editors and contributors describe practical ways to develop classroom goals, assessments, materials, and methods that use UDL to meet the needs of all learners. Specific teaching ideas are presented for reading, writing, science, mathematics, history, and the arts, including detailed examples and troubleshooting tips. Particular attention is given to how UDL can inform effective, innovative uses of technology in the inclusive classroom. Subject Areas/Keywords: assessments, classrooms, content areas, curriculum design, digital media, educational technology, elementary, inclusion, instruction, learning disabilities, literacy, schools, secondary, special education, supports, teaching methods, UDL, universal design Audience: General and special educators in grades K-8, literacy specialists, school psychologists, administrators, teacher educators, and graduate students"--

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.
