Angelica is their newest replacement, taken to ensure the survival of this long-lived race and to discourage falling in love with a human. Yet Angelica is not like the previous replacements. Even her Architect is unusual. Clara, commander of the Slayers and deadliest of the Lymerians, is chosen. When she steps forward, their fates are sealed. The Laws of Liturgy are binding. As Clara and two Guards descend into the dungeons with Angelica, the entire race wonders what kind of Lymerian will return when the transition is complete. The latest advances in research on intracranial implantation of hardware models of neural circuitry. The continuing development of implantable neural prostheses signals a new era in bioengineering and neuroscience research. This collection of essays outlines current advances in research on the intracranial implantation of devices that can communicate with the brain in order to restore sensory, motor, or cognitive functions. The contributors explore the creation of biologically realistic mathematical models of brain function, the production of microchips that incorporate those models, and the integration of microchip and brain function through neuron-silicon interfaces. Recent developments in understanding the computational and cognitive properties of the brain and rapid advances in biomedical and computer engineering both contribute to this cutting-edge research. The book first examines the development of sensory system prostheses--cochlear, retinal, and visual implants--as the best foundation for considering the extension of neural prostheses to the central brain region. The book then turns to the complexity of neural representations, offering, among other approaches to the topic, one of the few existing theoretical frameworks for modeling the hierarchical organization of neural systems. Next, it examines the challenges of designing and controlling the interface between neurons and silicon, considering the necessity for bidirectional communication and for multiyear duration of the implant. Finally, the book looks at hardware implementations and explores possible ways to achieve the complexity of neural function in hardware, including the use of VLSI and photonic technologies.

Approaching the study of literature as a unique form of the philosophy of language and mind--as a study of how we produce nonsense and imagine it as sense--this is a book about our human ways of making and losing meaning. Brett Bourbon asserts that our complex and variable relation with language defines a domain of meaning and being that is misconstrued and missed in philology, in literary studies, and in our ordinary understanding of what we are and how things make sense. Accordingly, his book seeks to demonstrate how the study of literature gives us the means to understand this relationship. The book itself is framed by the literary and philosophical challenges presented by Joyce's Finnegan's Wake and Wittgenstein's Philosophical Investigations. With reference to these books and the problems of interpretation and meaning that they pose, Bourbon makes a case for the fundamental philosophical character of the study of literature, and for its dependence on theories of meaning disguised as theories of mind. Within this context, he provides original accounts of what sentences, fictions, non-fictions, and poems are; produces a new account of the logical form of fiction and of the limits of interpretation that follow from it; and delineates a new and fruitful domain of inquiry in which literature, philosophy, and science intersect. Table of Contents: Preface Note on Abbreviations Introduction: What Are We When We Are Not? Part I The Surface of Language and the Absence of Meaning 1. From Soul-Making to Person-Making 2. The Logical Form of Fiction 3. The Emptiness of Literary Interpretation 4. To Be But Not To Mean 5. How Do Oracles Mean? Part II Senses and Nonsenses: Joyce's Finnegans Wake and Wittgenstein's Philosophical Investigations 6. A Twitterlitter of Nonsense: Askesis at Finnegans Wake 7. The Analogy between Persons and Words 8. "The Human Body Is the Best Picture of the Human Soul" 9. The Senses of Time 10. Being Something and Meaning Something Bibliography Acknowledgments Index This is an adventurous and unusual book. Bourbon moves back and forth between literary and philosophical contexts with ease, showing in multifarious ways how the one can, often in unexpected ways, illuminate the other. Throughout these wide-ranging explorations Bourbon uncovers a good deal about both the nature of literary meaning and our distinctive -- if tellingly irreducible -- relations to literary texts. --Garry L. Hagberg, author of Art as Language: Wittgenstein, Meaning, and Aesthetic Theory and Meaning and Interpretation: Wittgenstein, Henry James, and Literary Knowledge

Joint replacement has been one of the major successes of modern medicine. Its continued success depends on effective collaboration between clinicians and researchers across many different areas in science and medicine. This important book brings together the wide range of research in this area and its implications for clinical practice. The book sets the scene with introductory chapters on joint biomechanics and tribology, materials for joint replacement and their interactions with the body, and regulatory issues. Part two reviews the use of metals and ceramics as joint replacement materials, joint design, bone cements and cementless fixation techniques, failure mechanisms and ways of predicting the lifetime of replacement joints. The third part of the book summarises research on how prosthetic joints interact with the body, including biological causes of joint failure, sterilisation techniques and the use of drug delivery systems to enhance joint replacement. The final group of chapters reviews key issues in replacing particular joints including the hip, knee, ankle, shoulder and elbow as well as developments in intervertebral disc and temporo-mandibular joint replacement technology. With its distinguished editor and international team of contributors, Joint replacement technology is a standard reference for the engineering and materials scientific communities, as well as surgeons seeking the best treatment for their patients. The decision to replace a piece of equipment should be based on facts and figures. The judgment which the owner-manager of a small company makes should be the result of weighing the costs of keeping the old equipment against the cost of its replacement. This guide discusses the elements involved in making such a cost comparison. Examples are used to illustrate the gathering and use of the appropriate cost figures. Sooner or later, you must decide whether you should keep an existing unit of equipment or replace it with a new unit. As time goes by, equipment deteriorates and becomes obsolete. Frequent breakdowns occur, defective output increases, unit labor costs rise, and production schedules cannot be met. At some point, these occurrences become serious enough to cause you to wonder whether or not you should replace the equipment. The problem is that the new equipment costs money, and the question that comes to you is: Will the advantages of the new equipment be great enough to justify the investment it requires? you answer this question by making a cost comparison. My name is Meir Liraz and I'm the author of this book. According to Dun & Bradstreet, 90% of all business failures analyzed can be traced to poor management. This is backed up by my own experience. In my 31 years as a business coach and consultant to businesses, I've seen practically dozens of business owners fail and go under -- not because they weren't talented or smart enough -- but because they were trying to re-invent the wheel rather than rely on proven, tested methods that work. And that is where this book can help, it will teach you how to avoid the common traps and mistakes and do everything right the first time. Table of Contents: 1. Introduction 2. Depreciation 3. Interest 4. Operating Costs 5. Revenues 6. An Annual Average Cost 7. The Old Equipment 8. The New Equipment 9. The Comparison 10 Irreducible Factors

Winner of the VCU Cabell First Novelist Award Winner of the American Library Association's Sophie Brody Medal Finalist for the National Jewish Book Award A singularly talented writer makes his literary debut with this provocative, soulful, and sometimes hilarious story of a failed journalist asked to do the unthinkable: Forge Holocaust-restitution claims for old Russian Jews in Brooklyn, New York. Yevgeny Gelman, grandfather of Slava Gelman, [didn't suffer in the exact way] he needs to have suffered to qualify for the restitution the German government has been paying out to Holocaust survivors. But suffer he has!as a Jew in the war: as a second-class citizen in the USSR; as an immigrant to America. So? Isn't his grandson a [writer]? High-minded Slava wants to put all this immigrant scraping behind him. Only the American Dream is not panning out for him!Century, the legendary magazine where he works as a researcher, wants nothing greater from him. Slava wants to be a correct, blameless American!but he wants to be a lionized writer even more. Slava's turn as the Forger of South Brooklyn teaches him that not every fact is the truth, and not every lie a falsehood. It takes more than law-abiding to become an American; it takes the same self-reinvention in which his people excel. Intoxicated and unmoored by his inventions, Slava risks exposure. Cornered, he commits an irrevocable act that finally grants him a sense of home in America, but not before collecting a price from his family. A Replacement Life is a dark, moving, and beautifully written novel about family, honor, and justice.

Excerpt from The Natural Replacement of White Pine on Old Fields in New England The increasing, use and value of second-growth white pine have caused considerable interest to be taken in its rate of growth and reproduction. Many persons in New England who are familiar with past conditions can recall the time when land which to-day has valu able pine upon it was under cultivation or in use as pasture. When such lots are cut, however, trees of little value frequently replace the pine growth, so that White pine in New England is threatened with extermination. To insure its perpetuation practical methods for its renewal must be employed at once. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
