The basic thing to understand about the calendar is that it is a human, not a natural, construction. There is no single universal measure of time. We take our time from the movements of the heavens.

Age is a complex cross-cutting notion for at least two reasons: the intricate interweaving of its biological and socio-cultural meanings and its dual significance as both a benchmark in an individual's life course and a foundation for social structure. This book offers new perspectives on age and ageing by combining achievements in the biological sciences and their different applications and interpretations in demography, anthropology, psychology and other pertinent disciplines. Thirty contributors from these various fields revisit the measures and the biological models of ageing, the borderline between normal and pathological ageing, the pertinence of chronological age as a benchmark along the life course, its interrelations with psychological development, with reproductive phases and other life events, the «normalizing» role ascribed by age classes and the risk of falling into ageism, the cross-cultural diversity

and temporal changes of its meanings, the gender divide (real and perceived), as well as the rights that should be enjoyed at each age.

Uniquely wide-ranging in its coverage of key concepts, themes and issues relating to human growth and development in adults, this textbook explores the crucial challenges and transitions that adults negotiate in their lives. It examines key topics and issues within professional practice with adults and their families, covering a wide range of practice areas and fusing essential theory and research with practical application. Drawing on insights and debates from across sociology, psychology, criminology and aligned disciplines, this textbook is thoughtfully structured to provide an accessible and supportive resource. Key features include: • chapter-by-chapter summaries, case studies and practice examples; • active learning activities to consolidate knowledge; • a broad range of tools to develop critical thinking and reflective practice. With a companion volume that addresses children and young people, this is an essential tool for students and a valuable refresher resource for experienced practitioners.

The Maa of East Africa are a cluster of related pastoral peoples who share a social organization based on age. This groups men into life-long cohorts from their initiation in youth, regardless of family wealth. Historically, this type of pre-market society has been described in every continent, but East Africa provides the principal surviving region of age-based societies, among whom the Maasai are the best known. In this volume, comparison between three branches of Maa

Access Free Human Clocks The Bio Cultural Meanings Of Age Population

highlights different aspects of their society: the dynamics of power with age and gender among the Maasai, of ritual performance and belief among the Samburu, and of historical change among the Chamus. Here it is argued that understanding another culture can only be approached through models derived in the first instance from the representations conveyed by members of that culture. The social anthropologist may then elaborate these images through the choice of analytical parallels, even extending to other disciplines and personal experience. Each chapter in this volume views Maa institutions through a different lens, exploring models relevant to a comprehensive analysis of their social life.

When Reproduction meets Ageing questions the nature of reproductive ageing and reproductive biomedicine.

This lively text by leading medical anthropologist Elisa Sobo offers a unique, holistic approach to human diversity and rises to the challenge of truly integrating biology and culture. The inviting writing style and fascinating examples make important ideas from complexity theory and epigenetics accessible to students. In this second edition the material has been updated to reflect changes in both the scientific and socio-cultural landscape, for example in relation to topics such as the microbiome and transgender. Readers learn to conceptualize human biology and culture concurrently—as an adaptive biocultural capacity that has helped to produce the rich range of human diversity seen today. With clearly structured

Topics, an extensive glossary and suggestions for further reading, this text makes a complex, interdisciplinary topic a joy to teach

An extensive overview of the rapidly growing field of biological anthropology; chapters are written by leading scholars who have themselves played a major role in shaping the direction and scope of the discipline. Extensive overview of the rapidly growing field of biological anthropology Larsen has created a who's who of biological anthropology, with contributions from the leading authorities in the field Contributing authors have played a major role in shaping the direction and scope of the topics they write about Offers discussions of current issues, controversies, and future directions within the area Presents coverage of the many recent innovations and discoveries that are transforming the subject

Focuses on the paradoxical, dialectical, and mystifying facets of human interaction, not merely to elucidate dysfunctional relationship phenomena, but to help readers explore and understand it in relation to a broader understanding about relationships. This volume is of interest to relationship researchers in social psychology and sociology.

This comprehensive, two-volume handbook compiles the current case law, management practices, and social science research on workplace discrimination, including federal- and state-protected categories. * A chapter is included on each type of workplace discrimination per the Equal Employment Opportunity Commission, including sex discrimination, race/color

Access Free Human Clocks The Bio Cultural Meanings Of Age Population

discrimination, and equal compensation
discrimination * Contributions from distinguished attorneys, management consultants, scholars, and academicians working in the area of workplace discrimination * An overview of the chronology of case law in each type of workplace discrimination * A bibliography accompanying each chapter with additional references provided in appendices

The standard approach to cognitive development most frequently consists of cross-sectional studies comparing different ages and groups while restricted to a single task. The necessity to focus on the individual in an idiographic perspective, rather than on the task or the variable, has been repeatedly emphasized, most recently in several very important papers by Nesselroade and Molenaar. Variability has also emerged as a crucial characteristic. Moreover, understanding the developmental construction of a given cognitive achievement is imperative to understanding cognitive functioning in adulthood. The general objective of this book is to focus on the individual by studying intraindividual and interindividual variability in various cognitive tasks, that is, intraindividual variability across items of a given task ("inconsistency"), across various cognitive tasks ("dispersion"), and/or across years ("intraindividual change"), and of course, on interindividual differences in intraindividual variability. This book presents empirical studies that have been conducted by research groups in Europe and in North America, prominent in the field of variability and development or methodology. The 26 authors/co-authors include senior authors such as

Access Free Human Clocks The Bio Cultural Meanings Of Age Population

Eautrey, Schmiedek, Dauvier, van der Maas, Ghisletta, Stawski, MacDonald, and de Ribaupierre.

Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined, explicitly emphasizing the dynamic interaction between humans and their larger social, cultural, and physical environments. The biocultural approach emerged in anthropology in the 1960s, matured in the 1980s, and is now one of the dominant paradigms in anthropology, particularly within biological anthropology. This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential, productive, and important areas of research within biocultural anthropology. These are: critical and synthetic approaches within biocultural anthropology; biocultural approaches to identity, including race and racism; health, diet, and nutrition; infectious disease from antiquity to the modern era; epidemiologic transitions and population dynamics; and inequality and violence studies. Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely, widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach, and synthetic in its coverage of contemporary scholarship in biocultural anthropology. Students will be able to grasp the history of the biocultural approach, and how that history continues to impact scholarship, as well as the scope of current research within the approach, and the foci of biocultural research into the future. Importantly,

Access Free Human Clocks The Bio Cultural Meanings Of Age Population

Contributions in the text follow a consistent format of a discussion of method and theory relative to a particular aspect of the above six topics, followed by a case study applying the surveyed method and theory. This structure will engage students by providing real world examples of anthropological issues, and demonstrating how biocultural method and theory can be used to elucidate and resolve them. Key features include: Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples. Comprehensive treatment of diverse topics within biocultural anthropology, from human variation and adaptability to recent disease pandemics, the embodied effects of race and racism, industrialization and the rise of allergy and autoimmune diseases, and the sociopolitics of slavery and torture. Contributions and sections united by thematically cohesive threads. Clear, jargon-free language in a text that is designed to be pedagogically flexible: contributions are written to be both understandable and engaging to both undergraduate and graduate students. Provision of synthetic theory, method and data in each contribution. The use of richly contextualized case studies driven by empirical data. Through case-study driven contributions, each chapter demonstrates how biocultural approaches can be used to better understand and resolve real-world problems and anthropological issues.
