Humic substances occur  
in all kinds of aquatic  
systems, but are  
particularly important in  
northern, coniferous  
areas. They strongly  
modify the aquatic

ecosystems and also  
constitute a major  
problem in the drinking  
water supply. This  
volume covers all  
aspects of aquatic humic

origin and chemical  
properties, their effects  
on light and nutrient  
regimes and  
biogeochemical cycling,  
to their role regarding

are treated as well.

Aquatic Ecosystems  
explains the interplay  
between various

movements of matter  
and energy through  
ecosystems mediated by  
Dissolved Organic  
Matter. This book  
provides information on  
how much DOM there  
is in a particular aquatic  
ecosystem and where it  
originates. It explains  
whether the DOM  
composition varies from  
time to time and place to  
place. It also details how

# Access Free Humic Fulvic

DOM becomes incorporated into microbial food webs, and gives a better, clarifying, understanding to its significance of DOM.

Dissolved Organic Matter (called DOM) is incredibly important in all aquatic ecosystems. Although it might seem that logs and leaves are more important, in fact

# Access Free Humic Fulvic

the DOM is more crucial because the DOM is in a form that is available for use by all the organisms living in the the water.

Furthermore, DOM influences complex food webs by mediating the availability of aquatic nutrients, metals, salts and minerals. DOM also affects water clarity, which of course has

alters the way animals  
and plants live and feed  
in the water. There are  
many ways to study  
DOM and this book  
focuses on several  
central questions. How  
much DOM is there in a  
particular aquatic  
ecosystem? Where does  
it come from? Does the  
composition of the  
DOM vary from time to  
time and place to place?

Organic Soil

How does DOM  
become incorporated  
into microbial food  
webs, which are the  
basis of plant,  
invertebrate and  
vertebrate food webs?  
How can the answers to  
these and other  
questions about DOM  
be considered together  
so that a better  
understanding of the  
significance of DOM

This book presents a compilation of case studies from different countries on achieving agricultural sustainability. The book stresses that, in order to meet the needs of our

Access Free

rapidly growing  
population, it is  
imperative to increase  
agricultural  
productivity. If global  
food production is to  
keep pace with an  
increasing population,  
while formulating new  
food production  
strategies for developing  
countries, the great  
challenge for modern  
societies is to boost

productivity. Today, the application of chemicals to enhance plant growth or induced resistance in plants is limited due to the negative effects of chemical treatment and the difficulty of determining the optimal concentrations to benefit the plant. In the search for alternative means to solve these problems,

biological applications  
have been extensively  
studied. Naturally  
occurring plant-microbe-

in many ways to

greater understanding of  
how plants and
