Fifteen-year-old Drew "True" Robinson loves being the best point-guard prospect on his high-school basketball team, but learns the consequences of fame through a former player, as well as through the man who expects to be his manager when True reaches the NBA.

Best Reference Books of 2012 presented by Library Journal The Great Irish Famine is the most pivotal event in modern Irish history, with implications that cannot be underestimated. Over a million people perished between 1845-1852, and well over a million others fled to other locales within Europe and America. By 1850, the Irish made up a quarter of the population in Boston, New York City, Philadelphia, and Baltimore. The 2000 US census had 41 million people claim Irish ancestry, or one in five white Americans. Atlas of the Great Irish Famine (1845-52) considers how such a near total decimation of a country by natural causes could take place in industrialized, 19th century Europe and situates the Great Famine alongside other world famines for a more globally informed approach. The Atlas seeks to try and bear witness to the thousands and thousands of people who died and are buried in mass Famine pits or in fields and ditches, with little or nothing to remind us of their going. The centrality of the Famine workhouse as a place of destitution is also examined in depth. Likewise the atlas represents and documents the conditions and experiences of the many thousands who emigrated from Ireland in those desperate years, with case studies of famine emigrants in cities such as Liverpool, Glasgow, New York and Toronto. The Atlas places the devastating Irish Famine in greater historic context than has been attempted before, by including over 150 original maps of population decline, analysis and examples of poetry, contemporary art, written and oral accounts, numerous illustrations, and photography, all of which help to paint a fuller picture of the event and to trace its impact and legacy. In this comprehensive and stunningly illustrated volume, over fifty chapters on history, politics, geography, art, population, and folklore provide readers with a broad range of perspectives and insights into this event.

In an effort to more clearly define the engineering method, this document attempts to draw distinctions between engineering and science. Part I, "Some Thoughts on Engineering," discusses strategies that engineers employ to solve problems, and the characteristics of the types of engineering problems. Part II, "The Principal Rule of the Engineering Method," gives a definition of the engineering method and provides examples which: (1) compare individual engineers; (2) establish a rule for judging the performance of an engineer; (3) compare the technological developments of various nations; (4) analyze several pedagogical strategies of engineering education; and (5) define the relationship between the engineer and society. Part III, "Some Heuristics Used by the Engineering Method," includes some simple rules of thumb, factors about safety, heuristics that affect the engineer's attitude toward his/her work, heuristics that engineers use to keep risk within acceptable bounds, and factors dealing with resource allocation. (TW)

First published in 1999, the groundbreaking Exile and Pride is essential to the history and future of disability politics. Eli Clare's revelatory writing about his experiences as a white disabled genderqueer activist/writer established him as one of the leading writers on the intersections of queerness and disability and permanently changed the landscape of disability politics and queer liberation. With a poet's devotion to truth and an activist's demand for justice, Clare deftly unspools the multiple histories from which our ever-evolving sense of self unfolds. His essays weave together memoir, history, and political thinking to explore meanings and experiences of home: home as place, community, bodies, identity, and activism. Here readers will find an intersectional framework for understanding how we actually live with the daily hydraulics of oppression, power, and resistance. At the root of Clare's exploration of environmental destruction and capitalism, sexuality and institutional violence, gender and the body politic, is a call for social justice movements that are truly accessible to everyone. With heart and hammer, Exile and Pride pries open a window onto a world where our whole selves, in all their complexity, can be realized, loved, and embraced.

This volume collects the best scientific contribution presented in the 3rd World Conference on Terraced Landscapes held in Italy from 6th to 15th October 2016, offering a deep and multifaceted insight into the remarkable heritage of terraced landscapes in Italy, in Europe and in the World (America, Asia, Australia). It consists of 2 parts: a geographical overview on some of the most important terraced systems in the world (1st part), and a multidisciplinary approach that aims to promote a multifunctional vision of terraces, underlining how these landscapes meet different needs: cultural and historical values, environmental and hydrogeological functions, quality and variety of food, community empowerment and sustainable development (2nd part). The volume offers a great overview on strengths, weaknesses, functions and strategies for terraced landscapes all over the world, summarizing in a final manifest the guidelines to provide a future for these landscapes as natural and cultural heritage.
