This book explores how social, economic and political factors set the stage for Hurricane Andrew by influencing who was prepared, who was hit the hardest, and who was most likely to recover. Employing unique research data the authors analyze the consequences of conflict and competition on disaster preparation, response and recovery, especially where associated with race, ethnicity and gender.

On August 29, 2005, Hurricane Katrina made landfall near New Orleans leaving death and destruction across the Louisiana, Mississippi, and Alabama Gulf Coast counties. The lethargic and inept emergency response that followed exposed institutional flaws, poor planning, and false assumptions that are built into the emergency response and homeland security plans and programs. Questions linger: What went wrong? Can it happen again? Is our government equipped to plan for, mitigate, respond to, and recover from natural and manmade disasters? Can the public trust government response to be fair? Does race matter? Racial disparities exist in disaster response, cleanup, rebuilding, reconstruction, and recovery. Race plays out in natural disaster survivors' ability to rebuild, replace infrastructure, obtain loans, and locate temporary and permanent housing. Generally, low-income and people of color disaster victims spend more time in temporary housing, shelters, trailers, mobile homes, and hotels - and are more vulnerable to permanent displacement. Some 'temporary' homes have not proved to be that temporary. In exploring the geography of vulnerability, this book asks why some communities get left behind economically, spatially, and physically before and after disasters strike.

In recent years, the world has watched in horror as tsunamis, earthquakes, and hurricanes have wrought havoc across countries and continents. While these events have different circumstances, they share a common factor: the overwhelming majority of victims are women, children, elderly, disadvantaged, or disabled. Evidence gathered from these events clearly demonstrates how social structure and roles produce extensive human suffering and differential impacts. Focusing explicitly on the social construction of disasters, Social Vulnerability to Disasters examines how the characteristics of an event alone do not create the tragedies that unfold. The book discusses why such vulnerabilities exist, what can be done to foster change, and ultimately, reduce vulnerabilities and build capacity. It takes a multi-disciplinary approach to examine historical, geographic, social, and cultural factors and conditions that put people differently at risk before, during, and after disasters. The contributors explore how vulnerable social groups are affected by and cope with hazardous conditions and events. Each chapter provides strategies for community based mitigation by engaging those populations most at risk. Research has shown that recognizing and focusing on at-risk populations can create better mitigation, response, preparedness, and recovery capabilities, as well as lessening the economic and social impact of disasters. Based on materials developed for the FEMA Higher Education Project, this book is an empirically-based guide on the practical value of incorporating social aspects of disasters into emergency management, public administration, and social service programs. All royalty proceeds from the book benefit the Mary Fran Myers Scholarship Fund at the Natural Hazards Center of the University of Colorado, Boulder.

Women, Gender and Disaster: Global Issues and Initiatives examines gender within the context of disaster risk management. It argues for gender mainstreaming as an effective strategy towards achieving disaster risk reduction and mitigating post-disaster gender disparity. Highlighting that gender inequalities pervade all aspects of life, it analyses the failure to implement inclusive and gender-sensitive approaches to relief and rehabilitation work. While examining positive strategies for change, the collection focuses on women's knowledge, capabilities, leadership and experience in community resource management. The authors emphasize that these strenghtis in women, which are required for building resilience to hazards and disasters, are frequently overlooked. This timely book will be extremely useful to policy makers and professionals active in the field of disaster management and to academics and students in gender studies, social work, environmental studies and development studies.

The 2010 Haiti and Chile earthquakes, the 2010 BP oil spill in the Gulf of Mexico, and the 2011 Fukushima earthquake and tsunami in Japan are but a few examples of recent catastrophic events that continue to reveal how social structure and roles produce extensive human suffering and differential impacts on individuals and communities. These events bring social vulnerability to the forefront in considering how disasters unfold, clearly revealing that disasters are not created from the physical event alone. Equally important, people—even those considered vulnerable—respond in innovative and resilient ways that unveil the strength of human ingenuity and spirit. It is not a foregone conclusion that a hazard event, even a large one, will result in catastrophic loss. This updated second edition of Social Vulnerability to Disasters focuses on the social construction of disasters, demonstrating how the characteristics of an event are not the only reason that tragedies unfold. By carefully examining and documenting social vulnerabilities throughout the disaster management cycle, the book remains essential to emergency management professionals, the independent volunteer sector, homeland security, and related social science fields, including public policy, sociology, geography, political science, urban and regional planning, and public health. The new edition is fully updated, more international in scope, and incorporates significant recent disaster events. It also includes new case studies to illustrate important concepts. By understanding the nuances of social vulnerability and how these vulnerabilities compound one another, we can take steps to reduce the danger to at-risk populations and strengthen community resilience overall. Features and Highlights from the Second Edition: Contains contributions from leading scholars, professionals, and academics, who draw on their areas of expertise to examine vulnerable populations Incorporates disaster case studies to illustrate concepts, relevant and seminal literature, and the most recent data available in addition to highlighting the U.S. context, integrates a global approach and includes numerous international case studies Highlights recent policy changes and current disaster management approaches Infuses the concept of community resilience and building capacity throughout the text Includes new chapters that incorporate additional perspectives on social vulnerability Instructor's guide, PowerPoint® slides, and test bank available with qualifying course adoption

Critical incidents all too often explode onto the social conscious and challenge our sense of security. This comprehensive handbook brings together a range of experts who provide a foundation for the field of critical incident analysis by examining specific incidents9/11, the Virginia Tech massacre, the H1N1 pandemic, the BP oil spill, and more--through various methodological and disciplinary lenses.

Broadening the Contours in the Study of Black Politics, volume 17 of the National Political Science Review (NPSR), is divided thematically into two books, available separately or as a set. The first concentrates on the institutional aspects of Black politics. The second book addresses various dimensions of social capital that constitute the fundamental building blocks of Black politics. Each contains peer-reviewed articles, a symposium section, and book reviews, as well as other featured sections. Together, these books build on the previous NPSR volume, Black Women in Politics. The symposium in Volume 17:1 examines the struggle of Black women, both in the political science discipline and in getting their work published. In the symposium section of Volume 17:2, members of the National Conference of Black Political Scientists carry on a revealing conversation about the dilemmas of professional life for Black women in political science. The set also contains a section called "Trends," which offers data to use as starting points for discussions in teaching, on professional panels, or in the mass media, regarding the new versions of the Voting Rights Act after the Shelby County v. Holder decision of 2013. Both volumes 17:1 and 17:2 contain rigorously vetted articles on significant themes in the study of Black politics. This set represents the most recent offering in the distinguished National Political Science Review series.

Society has limited hazard mitigation dollars to invest. Which actions will be most cost effective, considering the true range of impacts and costs incurred? In 1997, the H. John Heinz III Center for Science, Economics and the Environment began a two-year study with a panel of experts to help develop new strategies to identify and reduce the costs of weather-related hazards associated with rapidly increasing coastal development activities.The Hidden Costs of Coastal Hazards presents the panel's findings, offering the first in-depth study that considers the costs of coastal hazards to natural resources, social institutions, business, and the built environment. Using Hurricane Hugo, which struck South Carolina in 1989, as a case study, it provides for the first time information on the full range of economic costs caused by a major coastal hazard event. The book: describes and examines unreported, undocumented, and hidden costs such as losses due to business interruption, reduction in property values, interruption of social services, psychological trauma, damage to natural systems, and others examines the concepts of risk and vulnerability, and discusses conventional approaches to risk assessment and the emerging area of vulnerability assessment recommends a comprehensive framework for developing and implementing mitigation strategies documents the human impact of Hurricane Hugo and provides insight from those who lived through it.The Hidden Costs of Coastal Hazards takes a structured approach to the problem of coastal hazards, offering a new framework for community-based hazard mitigation along with specific recommendations for implementation. Decisionmakers -- both policymakers and planners -- who are interested in coastal hazard issues will find the book a unique source of new information and insight, as will private-sector decisionmakers including lenders, investors, developers, and insurers of coastal property.

This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept "disaster" and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow.
