South Korea has been quietly growing into a major economic force, even challenging Japan in some industries. This growth may be seen as an example of "late industrialization" and this book discusses this point.

The volume presents high quality papers presented at the Second International Conference on Microelectronics, Computing & Communication Systems (MCCS 2017). The book discusses recent trends in technology and advancement in MEMS and nanoelectronics, wireless communications, optical communication, instrumentation, signal processing, image processing, bioengineering, green energy, hybrid vehicles, environmental science, weather forecasting, cloud computing, renewable energy, RFID, CMOS sensors, actuators, transducers, telemetry systems, embedded systems, and sensor network applications. It includes original papers based on original theoretical, practical, experimental, simulations, development, application, measurement, and testing. The applications and solutions discussed in the book will serve as a good reference material for future works.

This visionary work explores the sensitive balance between the personal and private aspects of grief, the social and cultural variables that unite communities in bereavement, and the universal experience of loss. Its global journey takes readers into the processes of coping, ritual, and belief across established and emerging nations, indigenous cultures, and countries undergoing major upheavals, richly detailed by native scholars and practitioners. In these pages, culture itself is recognized as formed through many lenses, from the ancestral to the experiential. The human capacity to mourn, endure, and make meaning is examined in papers such as: Death, grief, and culture in Kenya: experiential strengths-based research. Death and grief in Korea: the continuum of life and death. To live with death: loss in Romanian culture. The Brazilian ways of living, dying, and grieving. Death and bereavement in Israel: Jewish, Muslim, and Christian perspectives. Completing the circle of life: death and grief among Native Americans. It is always normal to remember: death, grief, and culture in Australia. The World of Bereavement will fascinate and inspire clinicians, providers, and researchers in the field of death studies as well as privately-held professional training programs and the bereavement community in general.

Our understanding of management in Asia has not kept pace with the demands of managers and students. The Handbook of Asian Management provides in-depth critical reviews of central topics in strategy and organizational behavior research in Asian contexts. Leading scholars take stock of what has been learned and give clear directions towards greater rigor and relevance for research in this region.

Exposure to noise at home, at work, while traveling, and during leisure activities is a fact of life for all Americans. At times noise can be loud enough to damage hearing, and at lower levels it can disrupt normal living, affect sleep patterns, affect our ability to concentrate at work, interfere with outdoor recreational activities, and, in some cases, interfere with communications and even cause accidents. Clearly, exposure to excessive noise can affect our quality of life. As the population of the United States and, indeed, the world increases and developing countries become more industrialized, problems of noise are likely to become more pervasive and lower the quality of life for everyone. Efforts to manage noise exposures, to design quieter buildings, products, equipment, and transportation vehicles, and to provide a regulatory environment that facilitates adequate, cost-effective, sustainable noise controls require our immediate attention. Technology for a Quieter America looks at the most commonly identified sources of noise, how they are characterized, and efforts that have been made to reduce noise emissions and experiences. The book also reviews the standards and regulations that govern noise levels and the federal, state, and local agencies that regulate noise for the benefit, safety, and wellness of society at large. In addition, it presents the cost-benefit trade-offs between efforts to mitigate noise and the improvements they achieve, information sources available to the public on the dimensions of noise problems and their mitigation,

and the need to educate professionals who can deal with these issues. Noise emissions are an issue in industry, in communities, in buildings, and during leisure activities. As such, Technology for a Quieter America will appeal to a wide range of stakeholders: the engineering community; the public; government at the federal, state, and local levels; private industry; labor unions; and nonprofit organizations. Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products.
