Water Law in India is the only book to offer a comprehensive survey of the legal instruments concerning water in India. It presents a variety of national and state-level instruments that make up the complex and diverse field of water law and policy. This book fills a critical gap in the study of water law, providing

a rich reference point for the entire gamut of legal mechanisms available in India. This edition has been extensively revised to include new instruments on water regulation, such as the draft National Water Framework Bill, 2016, and the Model Groundwater (Sustainable

legal issues arising under international law, such as environment and human rights provisions, concerning the economic, environmental and social consequences of proposed water regulatory changes and their implementation at the national level. The book examines the situation in India which

In analysing the situation in India the volume is able to detail the interactions between

This volume thus straddles two domains, viz., (i) water-resource

than democratic India?

Studies based on regime type have shown that the level of public goods provision is higher in democratic systems than in authoritarian forms of government. However, public goods provision in China and India contradicts these findings. Whether in terms of access to education, healthcare,

public transportation, and basic necessities, such as drinking water and electricity, China does consistently better than India. This book argues that regime type does not determine public goods outcomes. Using empirical evidence from the Chinese and Indian municipal water sectors, the study explains and

demonstrates how a social contract, an informal institution, influences formal institutional design, which in turn accounts for the variations in public goods provision.

On the one hand, international freshwater law remains under-developed and existing legal instruments such as the 1997 UN Convention only address a limited set of relevant issues. Yet, the international law and policy framework concerning freshwater is

increasingly important in shaping up law reforms taking place at the national level, in particular in developing countries. Indeed, non-binding resolutions such as the Dublin Statement on Water and Sustainable Development (1992) have had an immense influence on water law reforms in most

developing countries.

This book seeks to conceive of and analyse freshwater regulation in a broader context, and go beyond a literature that either lauds or criticises ongoing water sector reforms to provide an analytical basis for the reforms which all countries will have to adopt in the near or medium-term future.
