In 1996 the Federal Accounting Standards Advisory Board (FASAB) 1 enacted Standard Number 6, Accounting for Property, Plant, and Equipment (PP&E), the first government-wide initiative requiring federal agencies to report dollar amounts of deferred maintenance annually. The FASAB has identified four overall objectives in federal financial reporting: budgetary integrity,

operating performance, stewardship, and systems and control. FASAB Standard Number 6, as amended, focuses on operating performance and stewardship. The FFC Standing Committee on Operations and Maintenance has prepared this report to identify potential issues that should be considered in any future amendments to the standard and to suggest approaches for resolving them. The committee's intent is to assist the CFO Council, federal agencies, the FASAB, and others as they consider how best to meet the objectives of federal financial reporting for facilities.

The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. Development Economics does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and

credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of

only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.

The Language of the Birds is a masterpiece of Eastern Turkish literature (now Uzbek), and was written by one of Central Asia's most prominent poets, Alisher Nava'i, shortly before his death in 1501. The story begins with the birds of the world realizing they are

far from their king and so they begin their arduous journey with the assistance of the wise bird Hoopoe as their guide. Hoopoe listens to their complaints and excuses along the way and encourages them to seek true life even though the journey is sometimes painful. This epic poem in prose form contains many anecdotes and stories from the oral history of the Silk Road and Islam. Through this story, people are exhorted to rise above any excuse they might have in their spiritual pilgrimage. Alisher Nava'i (1441-1501) is renowned in Central Asia for his numerous writings and lasting influence in Uzbekistan as well as the contemporary Central Asian republics. In modern Uzbekistan, Nava'i is revered above all other poets and his presence is still found – streets, museums, and even a province and city are named after him. His proverbs are found throughout Central Asia and he is considered the father of the Uzbek language. His

words for peace and against oppression are as timely today as they were 5 centuries ago. Nava'i lived in Herat, Afghanistan. His writings, endowments, and his life example have had lasting influence in Central Asia. In *The Language of the Birds*, we are introduced to what Nava'i thought is important in life. It is a world of love that goes beyond the rational and is ready to endure anything for the beloved. This book is for anyone who values great historical literature, as well as those needing inspiration in his or her own pilgrimage in life.

During the first decades of the twentieth century, modern states fighting World War I and II for the first time experimented with feeding - and starving - entire populations. Within the new globalizing economy, food became intimately intertwined with

waging war. In Europe, starvation claimed more lives than any other weapon of war. As Alice Weinreb shows in *Modern Hungers*, nowhere was this more apparent than in Germany, initiator and loser of both wars. The end of armed conflict in 1945 did not mean that such military strategies declined in significance. Fears of hunger and fantasies of abundance were instead reframed within a new political system that saw the world as divided between capitalism and communism. Divided Germany rapidly became the key European stage for the Cold War. During the postwar decades, Europeans lived longer, possessed more goods, and were healthier than ever before. Nothing signaled this shift more clearly than the disappearance of famine from the continent. So powerful was the experience of post-1945 abundance that it is hard today to imagine a time when the specter of hunger haunted Europe, demographers

feared that malnutrition would mean the end of whole nations, and the primary targets for American food aid was Belgium and Germany rather than Africa. Yet under both capitalist and communist systems, economic growth and political priorities proved inseparable from the modern food system. Drawing on sources ranging from military records to cookbooks to economic and nutritional studies from East and West German archives, *Modern Hungers* reveals similarities and striking ruptures in popular experience and state policy relating to the industrial food economy. It thus offers historical context for many key contemporary concerns ranging from humanitarian food aid to the gender-wage gap to the obesity epidemic.
