Front Pages is an illustrated novel of the real world created by the painter Nancy Chunn. Every day of 1996 Chunn claimed as an artistic canvas the front page of the New York Times. Using specialized rubber stamps and bold pastels to enhance, eradicate, and alter images and text, she created a commentary - colorful, intense, smart, compassionate, visually explosive - on the year’s events and the power of the press. When these artworks were shown at the Ronald Feldman Gallery in New York, they created a sensation. Chunn’s treatment of the events we all lived through - the Presidential campaign, the crash of TWA flight 800, the wars in Chechnya and Rwanda - will strike an immediate chord in readers tuned in to the complex frequencies of a political world awash in images and news. Gary Indiana’s interview with the artist provides lively and intimate insights into the artistic process as means of talking back to power and engaging with the world. Front Pages is being published to coincide with an exhibition of these works at The Corcoran Gallery of Art in Washington, DC, January 10-March 2, 1998.

Python for Software Design is a concise introduction to software design using the Python programming language. The focus is on the programming process, with special emphasis on debugging. The book includes a wide range of exercises, from short examples to substantial projects, so that students have ample opportunity to practice each new concept.

The book is designed to help the first year engineering students in building their concepts in the course on Programming for Problem Solving. It introduces the subject in a simple and lucid manner for a better understanding. It adopts a student friendly approach to the subject matter with many solved examples and unsolved questions, illustrations and well-structured C programs.

Made Easy Series is developed with an objective of meeting the requirement of books that cover syllabi of important core engineering subjects focusing completely on the manner in which concepts will be tested in examinations. Books in this series are designed in a question-and-answer format to cater to undergraduate students of all major technological universities and to equip them with the desired knowledge in a simple yet comprehensive manner. They explore all the important concepts of the syllabi with the help of solved questions and numerical problems of previous years’ question papers of these universities. Apart from being extremely student-friendly and lucid, the books in this series are rich in pedagogical features such as brief point-wise discussion of fundamental concepts, theoretical questions with answers, solved numerical problems, and objective questions and exercises for further practice (all taken from previous years’ question papers) that aid students in preparing well for university examinations.Because of the fiercely competitive nature of the current academic scenario and the large number of books available for each topic, it is extremely difficult for students to spend too much time in an in-depth study of each book, especially during examinations when they are hard-pressed for time. Made Easy Series will empower students to prepare for university examinations in a systematic and thorough manner in a limited amount of time.The syllabi of the following universities have been covered in the book: UPTU, Anna Univ., JNTU, VTU, RTU, RGTU, WBUT, BPUT, PTU, Pune Univ., Mumbai Univ.

Management and Entrepreneurship provides a complete overview of managerial decision-making responsibilities and the role played by entrepreneurship in developing an organization. Starting with the definition of management, the various facets of managerial roles and a broad account of the history of development of management thought, the book provides in-depth discussions on the nature, importance, and purpose of planning. It elaborates further on the importance of organizing and staffing, and directing and controlling. The discussion moves on to introduce the concept of entrepreneurship as a business development tool. Special emphasis is placed on entrepreneurship in the Indian environment with detailed discussions on the development of small-scale industry, the role of institutional support, and the importance of preparation of projects for entrepreneurial ventures. The book lays emphasis on simplified definitions and point-wise presentation of theoretical concepts. By adopting an application-oriented approach, it also provides numerous real-life examples, vivid illustrations, and inspirational case studies which play the dual role of explaining concepts as well as instilling entrepreneurial zeal in students.

This book provides an introduction to the mathematical and algorithmic foundations of data science, including machine learning, high-dimensional geometry, and analysis of large networks. Topics include the counterintuitive nature of data in high dimensions, important linear algebraic techniques such as singular value decomposition, the theory of random walks and Markov chains, the fundamentals of and important algorithms for machine learning, algorithms and analysis for clustering, probabilistic models for large networks, representation learning including topic modelling and non-negative matrix factorization, wavelets and compressed sensing. Important probabilistic techniques are developed including the law of large numbers, tail inequalities, analysis of random projections, generalization guarantees in machine learning, and moment methods for analysis of phase transitions in large random graphs. Additionally, important structural and complexity measures are discussed such as matrix norms and VC-dimension. This book is suitable for both undergraduate and graduate courses in the design and analysis of algorithms for data.
