How does one of the world's biggest Enterprise Resource Planning (ERP) suppliers develop software? How do Oracle, SAP, Microsoft and Co really work? Christine Grimm presents a first-hand account of a social researcher who entered the software laboratory of one of the biggest ERP providers. Presenting an in-depth ethnography on how people act within such labs, she reveals the highly unexpected social character of programming and shows how the vendor

reorganizes himself to find new ways to respond to the expectations of the market. Furthermore, the author highlights the informal practices when an ERP system, as a defective or incomplete product, re-enters the supplier's labs. The book provides a window into what happens if bugs are dug up and emotions on both the supplier and customer sides are running high.

This is an ethnographic study of the creation of a particular type of standard enterprise software package: Enterprise Resource Planning (ERP) systems, which support wide-ranging organisational functions within large and medium sized enterprises. Drawing upon the Social Shaping of Technology perspective and recent related attempts to theorise the Biography of Artefacts, this thesis addresses the under-researched area of ERP system development and

ERP system support. In providing a system vendor's viewpoint, it seeks to overcome current shortcomings in social research, notably from Information Systems and Organisational Studies, which focus almost exclusively on a user organisation perspective. Mostly concentrating on the moment of implementation, existing studies do not help us to better understand the software producer's viewpoint or to find explanations as to how ERP systems are produced and supported in such a way that they can meet the specific requirements of their highly diverse users (the current market leader SAP had over 12 million users (2008)). Overall, we have very limited understanding of what happens within software package laboratories and how such organisations organise their relationship with their wide and diverse user base throughout the different phases of the product life cycle. Addressing this gap in the social study of software packages, this research offers an ethnographical insider's perspective of the day-to-day working practices within one of the world's leading ERP system providers, encompassing both its development and support functions. Based on rich ethnographic data, the study demonstrates first, how a supplier manages its relationship with its diverse user base during the moment when the system re-enters the vendor's circle of responsibility through the software packages support channel. The sophisticated and mature mechanisms and policies are highlighted, which allow the vendor - not without challenges - to accommodate competing exigencies of its user base at this moment of product life cycle. Second, this research highlights how the software development phase is organised, by empirically describing and analysing from a social viewpoint, the software development process during a period of organisational change, in which the vendor reorganises itself in search for a new way to respond to the expectations of the market. Third, the account reveals unexpected

communitarian behaviour amongst software developers at all levels, demonstrating the social character of programming, a feature which has not been adequately recognised by current studies in this area. Fourth, overall, this study highlights the need for a change of the current research agenda in social software package research towards a vendor organisation's perspective, if we aim for a more complete understanding of the social aspects such type of technology.

For over a dozen years, the Vectors Lab has experimented with digital scholarship through its online publication, Vectors, and through Scalar, a multimedia authoring platform. The history of this software lab intersects a much longer tale about computation in the humanities, as well as tensions about the role of theory in related projects. Tara McPherson considers debates around the role of cultural theory within the digital humanities and addresses Gary Hall's claim that the goals of critical theory and of quantitative or computational analysis may be irreconcilable (or at the very least require far more time and care). She then asks what it might mean to design from conception digital tools and applications that emerge from contextual concerns of cultural theory and, in particular, from a feminist concern for difference. This path leads back to the Vectors Lab and its ongoing efforts at the intersection of theory and praxis.

This book explains how SaaS works and lists and describes many common misconceptions and pitfalls that laboratories have about implementing Quality Management Systems (QMS). By walking the reader through all ISO 15189 Standards and describing each in detail, we can show how to implement them in common sense and meaningful ways. This book demonstrates to clinical laboratories how to combine the rigor of international standards with the inherent benefits of contemporary cloud-based software systems so that they can involve the entire laboratory in making quality a shared habit.

Strictly off limits to the public, Plum Island is home to virginal beaches, cliffs, forests, ponds -- and the deadliest germs that have ever roamed the planet. Lab 257 blows the lid off the stunning true nature and checkered history of Plum Island. It shows that the seemingly bucolic island in the shadow of New York City is a ticking biological time bomb that none of us can safely ignore. Based on declassified government documents, in-depth interviews, and access to Plum Island itself, this is an eye-opening, suspenseful account of a federal government germ laboratory gone terribly wrong. For the first time, Lab 257 takes you deep inside this secret

world and presents startling revelations on virus outbreaks, biological meltdowns, infected workers, the periodic flushing of contaminated raw sewage into area waters, and the insidious connections between Plum Island, Lyme disease, and the deadly West Nile virus. The book also probes what's in store for Plum Island's new owner, the Department of Homeland Security, in this age of bioterrorism. Lab 257 is a call to action for those concerned with protecting present and future generations from preventable biological catastrophes.

Address Errors before Users Find Them Using a mix-and-match approach, Software Test Attacks to Break Mobile and Embedded Devices presents an attack basis for testing mobile and embedded systems. Designed for testers working in the ever-expanding world of "smart" devices driven by software, the book focuses on attack-based testing that can be used by individuals and teams. The numerous test attacks show you when a software product does not work (i.e., has bugs) and provide you with information about the software product under test. The book guides you step by step starting with the basics. It explains patterns and techniques ranging from simple mind mapping to sophisticated test labs. For traditional testers moving into the mobile and embedded area, the book bridges the gap between IT and mobile/embedded system testing. It illustrates how to apply both traditional and new approaches. For those working with mobile/embedded systems without an extensive background in testing, the book brings together testing ideas, techniques, and solutions that are immediately applicable to testing smart and mobile devices.
