The predominance of oil as the world's main source of energy, coupled with the recent phenomenal growth of the natural gas industry spurred by environmental considerations, ensure that the Gulf's energy sector will continue to play a pivotal role in the global market. With world demand projected to reach unprecedented levels led by Asian economic powers such as China and India, oil production peaking in key areas and geopolitical crises fueling greater uncertainty, issues of global supply security have come to the fore. All these factors have led to a steep rise in petroleum prices, filling the coffers of the oil producers but threatening to paralyze the global

economy and imposing a heavy burden on the ultimate consumers. In this energy scenario, where does the Gulf oil and gas sector stand? How can it meet its long-term strategic requirements while satisfying the energy needs of the global economy? This was the main focus of the ECSSR Tenth Annual Energy Conference on The Gulf Oil and Gas Sector: Potential and Constraints, held in Abu Dhabi, from September 26–27, 2004. The conference presentations of the energy experts compiled in this book examine both the possibilities and the problems of the Gulf energy sector in the wider global context. Important energy issues covered include the future prospects of OPEC, the impact of world oil prices on global growth, the strategic objectives of the Gulf energy sector, the influence of markets

and technology on regional reserves, the emerging partnerships between national and international oil companies, the imperatives for attracting Gulf energy investment and new developments in gas technology and regional gas trade. Regional case studies outline possible scenarios for the future of Iraqi oil, highlight policy options for Saudi Arabia as a swing producer and focus on the Norwegian experience of economic diversification.

As a founding OPEC member with an established oil sector and vast untapped oil reserves, Iraq has always

## Read Online Iraq Oil Gas Outlook

been a major player in the global oil industry. However, its oil sector has never realized its full potential, being hindered by UN sanctions in the 1990s and later by infrastructural damage following the US-led invasion of 2003. The disruption in Iraqi oil supply and the prospect of its resumption carries both short and long term implications—for Iraq, the Arabian Gulf, OPEC and the world oil market. Although OPEC did stabilize supply and prices in the immediate aftermath of the invasion, such geopolitical upheavals create major challenges in market management. On the new world oil map, the geographical focus of exploration and production is shifting away from the Arabian Gulf to newer areas such as Russia, the Caspian basin, Venezuela and the West African rim. With global energy

demand set to grow phenomenally, especially in Asia, and nations seeking to diversify and secure their oil supplies, both OPEC and Non-OPEC countries must make strategic investment and production choices to meet anticipated supply challenges. What are the prospects for a quick revival of the Iraqi oil industry? How will the return of Iraqi oil supplies to the world market affect Gulf producers? What are the resulting quota and supply adjustments that OPEC will have to consider? How will OPEC and Non-OPEC relations develop in the future? What strategic investments should Gulf oil producers make to safeguard their global position in the emerging oil scenario? Such key issues were debated by the industry experts who gathered at the ECSSR Ninth Annual Energy Conference

# Read Online Iraq Oil Gas Outlook

entitled Gulf Oil in the Aftermath of the Iraq War: Strategies and Policies from October 19-20, 2003 in Abu Dhabi, UAE. The conference presentations compiled in this book collectively offer valuable insight on all these vital energy concerns.

This book contains my articles from 2010. I have tried to examine some of the technical problems in the current oil and gas industry in Iraq. In the geology/geophysics and reservoir engineering section, I used the available information and in some cases, I estimate to fill the gap in the existing data. International contracts usually differ from case to case or from field to field; in Iraq, TSC and PSC still have unclear contract conditions and public information is not enough for the detailed calculation needed for exact

# Read Online Iraq Oil Gas Outlook

NPV and IRR. Additional concerns are the cost estimation down structure and geopolitical strategies of Iraq. The management of the existing oil and gas institutions in Iraq is one of the most urgent problems the country is facing. The restructuring of companies and the Ministry of Oil is generally addressed in my articles. I have also illustrated many possibilities for the restructuring and reorganization of the development of managerial and marketing systems. In the rebuilding of the country, and specially, the oil and gas industry in Iraq, there needs to be more investigation into how to optimize the exploitation of natural resources for better economic benefits for all parties (the owner of the resources as well as International oil companies). The close cooperation between the Ministry of Oil in Iraq and the IOC ?s

toward the country in the wake of the Gulf War. It also examines the political, economic, and security impact of sanctions, Iraq's future role as an oil exporter, the U.S. policy of dual containment in relation to Iraq, and options for dealing with Iraq in the future. }

"The future of energy is of enormous strategic importance, and the current energy market faces major uncertainties and risks. The goal of this study is to provide a risk assessment of the global oil market. Cordesman and Al-Rodhan study six major oil-producing regions of the world: the Middle East, Africa, Asia and the Pacific, Europe and Eurasia, North America, and South and Central America. In each case, the authors outline national oil developments and
