La ricerca ha avuto come obiettivo quello di verificare l'effettiva efficacia ed efficienza dell'implementazione dei Sistemi di Gestione Sicurezza sul Lavoro conducendo un'indagine quali-quantitativa di natura statistica sperimentale sull'andamento infortunistico nelle organizzazioni. In particolare sono state oggetto di analisi i trends infortunistici riferiti alle Piccole e Medie Aziende grazie ai dati forniti dall'Istituto INAIL e quelli delle grandi aziende a struttura articolata come il "Gruppo Ferrovie dello Stato" e "Trenitalia", "ENI Gruppo" e le singole società della holding ("Petrochimica", "Refining and Marketing", "Exploration e Production", "Eni Gas e Power", "EniPower"), "Finmeccanica", "Autostrade per l'Italia", "Federechimica", "Enel" e "Wind". La ricerca si conclude con la presentazione di un progetto che ha portato alla progettazione di un software sperimentale per monitorare le aziende con SGSL.

Beginning with 1962, references are not limited to material in the English language.

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

This book gathers the proceedings of the Multidisciplinary International Conference of Research Applied to Defense and Security (MICRADS), held at the Military Engineering Institute, Rio de Janeiro, Brazil, from 8 to 10th May 2019. It covers a variety of topics in systems, communication and defense; strategy and political-administrative vision in defense; and engineering and technologies applied to defense. Given its scope, it offers a valuable resource for practitioners, researchers, and students alike.

GET TO THE TRUTH People--friends, family members, work colleagues, salespeople--lie to us all the time. Daily, hourly, constantly. None of us is immune, and all of us are victims. According to studies by several different researchers, most of us encounter nearly 200 lies a day. Now there's something we can do about it. Pamela Meyer's Liespotting links three disciplines--facial recognition training, interrogation training, and a comprehensive survey of research in the field--into a specialized body of information developed specifically to help business leaders detect deception and get the information they need to successfully conduct their most important interactions and transactions. Some of the nation's leading business executives have learned to use these methods to root out lies in high stakes situations. Liespotting for the first time brings years of knowledge--previously found only in the intelligence community, police training academies, and universities--into the corporate boardroom, the manager's meeting, the job interview, the legal proceeding, and the deal negotiation. WHAT'S IN THE BOOK? Learn communication secrets previously known only to a handful of scientists, interrogators and intelligence specialists. Liespotting reveals what's hiding in plain sight in every business meeting, job interview and negotiation: - The single most dangerous facial expression to watch out for in business & personal relationships - 10 questions that get people to tell you anything - A simple 5-step method for spotting and stopping the lies told in nearly every high-stakes business negotiation and interview - Dozens of postures and facial expressions that should instantly put you on Red Alert for deception - The telltale phrases and verbal responses that separate truthful stories from deceitful ones - How to create a circle of advisers who will guarantee your success

This book is concerned with data in which the observations are independent and in which the response is multivariate. Companion book to Robust Diagnostic Regression Analysis (ISBN 0-387-95017) published by Springer in 2000.

Bulgaria and Serbia during socialism are outlined from many different points of view in this volume. Beyond local and personal trajectories the authors illuminate more general and comparative questions. Was there anything like a "socialist anthropology", common to all three countries? Did Soviet and/or Marxist influences, in the discipline and in society in general, penetrate so deeply as to form an unavoidable common denominator of anthropological practice? The answers turn out to be complex and subtle. While unifying ideological forces were very strong in the 1950s, diversity increased thereafter. Anthropology was entangled with national ideology in all three countries, but the evidence nonetheless calls for "polyphonic" interpretations.
