In 1959 at a fashionable New England college I introduced a course with what I believed to be an engaging title: "Problems in Christian Ethics." It quickly became very popular, probably because the students thought it might provide a last-gasp answer to the enormous problems raised by the changing world of the '50's and '60's. For both professor and students, the course provided a wonderful opportunity to work out one's point of view on ethical issues. But the major pedagogical stumbling block came in attempting to assign appropriate readings for the juicy subject matter. I either assigned the students a dozen different books to cover the course material, or I prohibited them from reading anything, insisting that the course's substantive content would come from the lectures. Now, after all these years, the problem has been solved. *Living Issues in Ethics*, a new book by Richard T. Nolan and Frank G. Kirkpatrick, fulfills admirably the need for a one-volume text discussing the basic problems in ethics and dealing with them in both a theoretical and a practical way. It is a solid book, totally contemporary and aware of the latest developments in Christian ethical thinking. In a lucid and engaging way, the authors present the following topics: "The Search for a Moral Philosophy," "Personal Identity and Fulfillment," "Health and Sexuality" and "Social Ethics." They engage the reader in subject matter ranging from "The Ingredients of a Moral Philosophy" to an insightful rendering of the history of that philosophy, as well as problems of femininity, varieties of love, marriage and the family, medical ethics, moral sexual conduct, obligations of the political order, the socialist alternative, the demand for expression versus the right to privacy, the dilemmas of dissent, sexual justice, energy and ecology, "life-boat" ethics, "just-war" theory, and many, many others. Each chapter contains a review and a section on suggested readings. The book is so good that I plan to use it in next year's "Problems in Christian Ethics." William A. Johnson Professor at Brandeis University, Mass.

Business ethics originated in the United States as an offshoot of theoretical ethics and as part of a movement in applied ethics that was initiated with medical ethics. Although a few small religious-based colleges and universities offered courses in business ethics just after the Second World War, business ethics as an academic field developed most seriously in many universities in the early 1970s. The field of medical ethics was well-developed by then, and it was a natural step to think about ethical issues in business as well. There was also a public reaction to a number of corporate scandals (e.g., price fixing, the Lockheed Japanese bribery allegations, the Goodyear airbrake scandal, etc. that encouraged universities to begin teaching the subject). Business ethics as an academic field was originally developed by philosophers, most of whom had come out of the analytic or Anglo-American philosophical traditions and who had been trained in classical ethics, on Aristotle, Kant, Mill, Bentham and perhaps Dewey. The resulting field then, has been dominated by this thinking. Although to date there are over 50

textbooks in business ethics, most textbooks in business ethics do not take into account contemporary continental philosophy. Although Marxism is sometimes taught in these courses, other more contemporary continental thinkers who could contribute substantially to the field have been ignored. This phenomenon is iterated in the professional journals and in theoretical books on the topic.

This book provides up-to-date critical analyses of the ethical implications of new legislation in community care and criminal justice, and of trends in social work thought and policy, such as managerialism, user empowerment and feminism.

As a healthcare practitioner, you will face a broad range of professional dilemmas in your everyday practice. From seeking consent to upholding patient confidentiality, you'll rely on your knowledge of ethics, the law and professional codes of conduct to guide your actions. Balancing these three strands can be difficult, but with detailed scenarios and accessible discussion, this book guides you through the complexities of practice. Taking a practice-based approach, the text explores the combination of ethical, legal and professional issues which characterise the field of healthcare. A range of experienced contributors come together to provide: ? detailed analysis of confidentiality, accountability, consent, capacity and justice, all grounded within the daily practice context; ? authoritative guidance through discussion of legal cases, excerpts from statutes and extracts from professional guidelines; ? realistic scenarios drawn from a range of health settings, unravelling and illustrating the guidelines, statutes and policies which influence practice; ? advice on balancing the conflicting pressures of the modern healthcare context, from facing time limitations to challenging the unprofessional practice of others. Ethics, Law and Professional Issues puts you at the centre of some of a practitioner's most difficult decisions. It is therefore an essential resource for any student of healthcare looking to develop an ethically, legally and professionally sound approach to practice.

The ETHICS IN ACTION program brings to life the ethical issues and dilemmas counselors often encounter and provides ample opportunity for discussion, self-exploration, and problem solving of the issues and dilemmas. The 22 video vignettes are based on a workshop for a group of counseling students, which included challenging questions and lively discussion, role-plays, and comments from the students and the group leaders. This educational program is divided into three segments: ethical decision-making, values and the helping relationship, and boundary issues and multiple relationships in counseling. While Kierkegaard's philosophy focuses on concrete human existence, his thought has rarely been challenged regarding concrete and contemporary moral issues. This volume offers an overview of contemporary ethical issues from a Kierkegaardian perspective, deliberately taking him out of the sphere of Theology and Christian Ethics, and examining the ways in which his works can provide fruitful insight into questions which Kierkegaard certainly never himself envisaged, such as accepting refugees into our communities, understanding how we relate to social media, issues of identity with regard to bioengineering or transgender identity, or problems of interreligious dialogue. The contributions in this volume, by international scholars, seek to address both the challenges and insights of

Kierkegaard's existential ethics for our contemporary societies, and its relation to topics of current interest in the field of moral philosophy. The volume is organized into three major sections: the first focusing on the relation between ethics and religion, a topic of primary importance with regard to the development of religious foundationalism and the challenges of dealing with diverse belief systems within our communities; the second on our understandings of ourselves and our relations to others with regard to issues of media and community; and the third targeting more specifically questions of identity, and the ways in which the developments of modern science impact identity construction. This work offers new paths for critically engaging with the moral issues of our times from an existential perspective.
