A number of developments in the museum movement during the last few years have forced museums to give greater attention to ethical issues. Members of a profession are increasingly regarded constituting an ethical community. Every person with such a community must have a sense of personal obligation as well as a responsibility for others to assure ethical achievement. This volume firmly places notions of ethics in the field of action. Museum Ethics considers the theoretical and practical elements of the philosophy of conduct in relation to critical contemporaty issues and museums. This discussion encompasses the procurement of artifacts, the rights of indigenous peoples, repatriation, the politics of display, the conservation of objects and the role of education, as well as the day-to-day management of a museum. All persons active in museum matters, whether custodian, curator, or trustee have an ethical obligation to the museum profession and the public. This volume will allow the professional and student to work towards a more responsible and responsive museum community.

A collection of essays by leading philosophers previously published from 1973 to 1998.

Problems from Philosophy is an introduction to philosophy which is organized around the great philosophical problems—the existence of God, the nature of the mind, human freedom, the limits of knowledge, and the truth about ethics. It begins by reflecting on the life of the first great philosopher, Socrates. Then it takes up the fundamental question of whether God exists. Next comes a discussion of death and the soul, which leads to a chapter about persons. The later chapters of the book are about whether objective knowledge is possible in science and ethics. Each chapter is self-contained and may be read independently of the others. Problems from Philosophy represents the final work of author and philosopher James Rachels. In it, he brings the same liveliness and clarity to the introduction of philosophy that he brings to his best-selling ethics text, The Elements of Moral Philosophy. The second and third edition have been revised by Rachels' son Stuart, who carefully has carefully refined his father's work to further strengthen its clarity and accessibility.

Brute Science investigates whether biomedical research using animals is, in fact, scientifically justified. Hugh LaFollette and Niall Shanks examine the issues in scientific terms using the models that scientists themselves use. They argue that we need to reassess our use of animals and, indeed, rethink the standard positions in the debate.

Exploring philosophy through detailed argument analyses of texts by philosophers from Plato to Strawson using a novel and transparent method of analysis. The best way to introduce students to philosophy and philosophical discourse is to have them read and wrestle with original sources. This textbook explores philosophy through detailed argument analyses of texts by philosophers from Plato to Strawson. It presents a novel and transparent method of analysis that will teach students not only how to understand and evaluate philosophers' arguments but also how to construct such arguments themselves. Students will learn to read a text and discover what the philosopher thinks, why the philosopher thinks it, and whether the supporting argument is good. Students learn argument analysis through argument diagrams, with color-coding of the argument's various elements—conclusion, claims, and " indicator phrases." (An online " mini-course " in argument diagramming and argument diagramming software are both freely available online.) Each chapter ends with exercises and reading questions. After a general introduction to philosophy and logic and an explanation of argument analysis, the book presents selections from primary sources, arranged by topics that correspond to contemporary debates, with detailed analysis and evaluation. These topics include philosophy of religion, epistemology, theory of mind, free will and determinism, and ethics; authors include Aristotle, Aquinas, Descartes, Hume, Kant, Ryle, Fodor, Dennett, Searle, and others. What Is the Argument? not only introduces students to great philosophical thinkers, it also teaches them the essential skill of critical thinking.

Capturing the inimitable enthusiasm of Louis Pojman's much acclaimed teaching, PHILOSOPHY: THE PURSUIT OF WISDOM introduces students to all the core topics in philosophy. Beginning with an inquiry into the nature and purpose of philosophy, this text moves through many traditional discussions--such as the existence of God, the problems of knowledge, the freewill/determinism debate, and the foundations of ethics--concluding with an exploration into existentialism and the meaning of life.
