Journal Impact Factor

The impact factor (IF) is a measure of the yearly average number of citations to recent articles published in that journal. It is often used to compare journals of the same category. Higher the Impact factor, higher is the ranking of the journal. But do not take this number as an absolute measure.

Find Impact Factor of Journal Online | Impact Factor ...
Normally, journals display their Impact Factor and CiteScore on their About Page. However, you have to be careful because predatory journals post fake Impact Factors too. Therefore, a best place to...

Journal Rankings on Psychiatry and Mental Health
The higher the impact factor, the more highly ranked the journal. It is one tool you can use to compare journals in a subject category. During 2017, the Journal Citation Reports (JCR) database tracked all impact factors for 12,298 journals. The table below shows the number and percentage of journals that were assigned impact factors ranging from 0 to 10+.

What is considered a good impact factor? - Ask the ...
Journal ranking is widely used in academic circles in the evaluation of an academic journal's impact and quality. Journal rankings are intended to reflect the place of a journal within its field, the relative difficulty of being published in that journal, and the prestige associated with it. They have been introduced as official research evaluation tools in several countries.

Journal ranking - Wikipedia
Journal Impact 2019-20 | Metric, Prediction & Ranking Science Journal Impact 2019-20 is 20.570. 50% scientists predict Science Journal Impact 2019-20 will be in the range of 42.0 ~ 42.5. Science Journal Impact 2019-20 Quartile is Q1.

Science Journal Impact 2019-20 | Metric, Prediction & Ranking
Naturally, review journals have some of the highest impact factors. Often, the first-ranked journal in the subject category listings will be a review journal. For example, under Biochemistry, the journal topping the list is Annual Review of Biochemistry with an impact factor of 35.5 in 1992.

The Clarivate Analytics Impact Factor - Web of Science Group
The impact factor or journal impact factor of an academic journal is a scientometric index calculated by Clarivate that reflects the yearly average number of citations that articles published in the last two years in a given journal received. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

Impact factor - Wikipedia
ISI ranking. Journals are often ranked by Impact Factor in an appropriate Clarivate Analytics subject category. As there are now two Impact Factors published – two-year and five-year Impact Factors – this rank may differ, so care is needed when assessing these ranked lists to understand which of the two metrics is being used.

Impact Factor - Elsevier Journal Metrics Visualization ...
The impact factor is a measure of the frequency with which the average article in a journal has been cited in a particular year. The JCR also lists journals and their impact factors and ranking in the context of their specific field (s).

How do I find the impact factor and rank for a journal?
In this year's reports, 94 SAGE journals have received a top 10 category rank, with 19 journals receiving their first Impact Factor (IF). 199 titles are now placed in the top 30% of the JCR, and 56% of SAGE journals are ranked within the top half of their subject category.

Impact Factor & Ranking Results | SAGE Publications Inc
This list provides a simple impact factor, computing a ratio of the number of citations by the number of items in the series. Citation counts are adjusted to exclude citations from the same series. These computations are experimental and based on the citation analysis provided by the CitEc project, which uses data from items listed in RePEc. Only series or journals with 50 or more items are ranked.

The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis. Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals. A sample of 57 publishers with 6,272 scientific journals and 50 standalone scientific journals was analyzed during research procedure. In this study, two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals, Alexa rank and Statscrop rank. The electronic databases through the internet constitute the main information resources of this study about the impact factors. The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web. Furthermore, it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non-linearly correlation. Even if there

is very strong correlation between impact factor and web rank for electronic journals, the prediction of impact factor from web rank is not possible and presents many divergences.

An analysis of journal rankings based on five commonly used bibliometric indicators (impact factor, article influence score, Source Normalized Impact per Paper, SCImago Journal Rank, and the Hirsch index) has been conducted. It is shown that despite a high correlation, these single indicator-based rankings are not identical. Therefore, a new approach to ranking academic journals is proposed based on the aggregation of single bibliometric indicators using threshold aggregation. The main property of this procedure is its non-compensability, which reduces opportunities for manipulation.

In this paper we use a new method to rank finance journals. Traditionally, journal qualities are measured either by the citation-based impact factor approach, or by the survey method. Although these two approaches have merits, their efficacy is also limited in many ways. Author Affiliation Index is a cost-effective and intuitively easy to understand approach to journal rankings. We define Author Affiliation Index as the ratio of articles authored by faculties at the world's top 80 finance programs divided by the total number of articles by all authors. Forty-one finance journals are ranked according to this index. The effectiveness of the index is comparable to prior citation-based and survey-based studies. We find Author Affiliation Index, if properly constructed, provides an easy and credible way to supplement the existing journal ranking methods. Due to its easiness to construct, the index is particularly useful for junior faculty seeking the right journals to publish but is unable to justify the journal quality because these journals are not ranked in existing studies.Based upon various definitions of the Author Affiliation Index, our findings indicate that Journal of Finance, Review of Financial Studies, Journal of Financial Economics, Journal of Financial and Quantitative Analysis, and Journal of Business unambiguously claim the top five spots in finance journal rankings. Some newer journals, such as Journal of Corporate Finance and Journal of Financial Markets, while ranked lower in the other studies, score impressively in our analysis. Compared with prior studies, our ranking is highly correlated with most of those journal rankings.

Examines current issues in journals publishing and reviews how the industry will develop over the next few years. With contributions from leading academics and industry professionals, the book provides an authoritative and balanced view of this fast-changing area. There are a variety of views surrounding the future of journals and these are covered using a range of contributors. Online access is now taken for granted - 90 per cent of journals published are now available online, an increase from 75 per cent in 2003. Looks at a fast moving and vital area for academics and publishers Contains contributions from leading international figures from universities and publishers

The ranking of academic journals is a contentious issue in the current higher education environment. Across the world, peers judge academics for tenure and promotion on the basis of the quality or prestige of the journals in which they publish. This research proposes a new metric (i.e., the MAG score) to assess journal impact and ranking in the field of marketing using the vox populi approach. The

findings show that the vox populi approach provides a more comprehensive measure of journal impact than other impact factor metrics from the perspective of academics.

ASIA CCS '17: ACM Asia Conference on Computer and Communications Security Apr 02, 2017-Apr 06, 2017 Abu Dhabi, United Arab Emirates. You can view more information about this proceeding and all of ACM�s other published conference proceedings from the ACM Digital Library: http://www.acm.org/dl.

The purpose of this book is to argue for the importance of caring in schools and school leadership and to provide understanding and guidance for the practice of caring school leadership. This book will provide a counterbalance to today's emphasis on academic press and accountability. Caring is at the heart of successful school leadership and successful schooling for students. The authors wish to enrich the understanding and practice of caring school leadership through the perspectives of other human service professions. This book will affirm for educators the importance of caring as a fundamental part of schooling for students. It will help practicing educators develop deeper understanding of caring as a quality of human relationships and it will help them understand the relationship of caring to student academic success and well-being. Most importantly, the book will benefit practicing educators by promoting understanding of caring school leadership and promoting its practice.

Economists are obsessed with rankings of institutions, journals, or scholars according to the value of some feature of interest. These rankings are invariably computed using estimates rather than the true values of such features. As a result, there may be considerable uncertainty concerning the ranks. In this paper, we consider the problem of accounting for such uncertainty by constructing confidence sets for the ranks. We consider both the problem of constructing marginal confidence sets for the rank of, say, a particular journal as well as simultaneous confidence sets for the ranks of all journals. The purpose of this paper is to review the approach to the construction of such confidence sets by Mogstad et al. (2020) and then apply their methods to rankings of economics journals and universities by impact factors.

Drawn from an October 2001 conference held in Italy, the 38 papers in this volume characterize the primary types of membranes and their processes, particularly in wastewater purification and bioprocessing. The papers are arranged into sections on membrane contactors, nanofiltration, charged membrane
