The Kingdom of Saudi Arabia has established itself as the twelfth-largest economy in the world, the largest West Asian economic power, world ' s largest oil producer, and a strong and capable force in international politics, particularly in the Sunni Islamic world. However, at present it is at crossroads. Should it continue as a ' kingdom ' or usher in the process of inclusive political representation? This volume answers such questions and explores how the state is coping with domestic, regional and global developments to remain relevant in the changing times. It provides a holistic overview of a slew of economic, political, cultural, military and security policy measures that have been initiated by the government. The work also offers a detailed analysis of Saudi Arabia ' s relations with three significant powers — USA, China and India — and how they are evolving under new geopolitical and geostrategic dynamics. This book will interest strategists, policymakers, researchers and students of international relations, geopolitics, political science and political economy as well as the informed reader.

Researchers developed two scenarios to envision the future of mobility in China in 2030. Economic growth, the presence of constraints on vehicle ownership and driving, and environmental conditions differentiate the scenarios. By making potential long-term mobility futures more vivid, the team sought to help decisionmakers at different levels of government and in the private sector better anticipate and prepare for change.
This publication presents a stocktaking of open government strategies and practices in Latin American countries, allowing them to compare and benchmark against good international practice.

The use of financial concepts and tools to shape development is hardly new, but their recent adoption by advocates of sustainable environmental management has created opportunities for innovation in business and regulatory groups. The Handbook of Environmental and Sustainable Finance summarizes the latest trends and attitudes in environmental finance, balancing empirical research with theory and applications. It captures the evolution of environmental finance from a niche scholarly field to a mainstream subdiscipline, and it provides glimpses of future directions for research. Covering implications from the Kyoto and Paris Protocols, it presents an intellectually cohesive examination of problems, opportunities, and metrics worldwide. Introduces the latest developments in environmental economics, sustainable accounting work, and environmental/sustainable finance Explores the effects of environmental regulation on the economy and businesses Emphasizes research about the trade-environmental regulation nexus, relevant for economics and business students

This volume examines mechanisms for regional peacemaking and conflict management in Europe and the Middle East. To date little research has been devoted to uncovering the conditions for peace, and the factors that contribute to stabilizing the state of peace. This volume assesses the factors that contribute to regional pacification, the incentives that motivate states in establishing peaceful relations, and most importantly, how regions become peaceful. It discusses the conditions under which various types of ' peace ' might emerge on a regional level and the factors most likely to determine the outcome. The book takes an innovative approach through a systematic comparison of two regions that are particularly prominent and important for the subject of regional pacification: Europe and the Middle East. While many believe that the European case is the indispensable model for peacemaking, others believe that these two regions are too different for Europe to be a useful framework for the Middle East. This volume occupies a middle ground between these two extreme positions. It argues that while a mindless copying of European models will not lead to peace in the Middle East, important insights can be gained from the most successful case of regional peacemaking to date. This work will be of much interest to students of regional security, peacemaking, conflict management, Middle East politics, European security and IR in general.

EXPERT ANALYSIS OF AN ILLEGAL AND IMMORAL PRACTICE The Bush administration detained and tortured suspected terrorists; the Obama administration assassinates them. Assassination, or targeted killing, off the battlefield not only causes more resentment against the United States, it is also illegal. In this interdisciplinary collection, human rights and political activists, policy analysts, lawyers and legal scholars, a philosopher, a journalist and a sociologist examine different aspects of the U.S. policy of targeted killing with drones and other methods. It explores the legality, morality and geopolitical considerations of targeted killing and resulting civilian casualties, and evaluates the impact on relations between the United States and affected countries. The book includes the documentation of civilian casualties by the leading non-governmental organization in this area; stories of civilians victimized by drones; an analysis of the first U.S. targeted killing lawsuit by the lawyer who brought the case; a discussion of the targeted killing cases in Israel by the director of PCATI which filed one of the lawsuits; the domestic use of drones; and the immorality of drones using Just War principles. Contributors include: Archbishop Desmond Tutu, Phyllis Bennis, Medea Benjamin, Marjorie Cohn, Richard Falk, Tom Hayden, Pardiss Kebriaei, Jane Mayer, Ishaq Menuchin, Jeanne Mirer, John Quigley, Dr. Tom Reifer, Alice Ross, Jay Stanley, and Harry Van der Linden.
