Valley ADB extends Rs 9.54 bn loan for water supply project The Asian Development Bank (ADB) has agreed to provide an additional financing of 90 million US Dollars (approximately Rs 9.54 billion) to the government of Nepal for the implementation of Kathmandu Valley Water Supply Improvement Project.

The global water and sanitation community is currently wrestling with the policy implications of two important realizations. The first is that it is quite possible for cities to actually run out of water—for the piped network to run dry. The second is that in many locations, basic water and sanitation interventions do not result in the large public health improvements that many water and sanitation professionals had hoped. As water and sanitation professionals work out the implications of these two realizations on policy and planning for water and sanitation improvements in the Global South, they will require an in-depth knowledge of local housing, water, and sanitation conditions, as well as a nuanced understanding of how households prioritize improvements in housing, water, and sanitation. The chapters in this book about Kathmandu illustrate the types of analyses of local conditions that are needed. Kathmandu holds many lessons for the global community about households ' responses to water scarcity and the management of water and sanitation services in periods of rapid urbanization and climate change. In Focus – a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the secto

This monograph examines contemporary environmental challenges facing Nepal, this landlocked country ' s representativeness in the wider South Asian context is both distinct and generalizable. In large part, this is because of its extremes of physiographical structure- plains, hill ranges, mountainous massifs - and wide range of altitudinal terrains, which represent and replicate South Asian and East Asian continental conditions differing as markedly as humid tropical lowlands, sub-tropical hill ranges and temperate to sub-arctic mountainous environments. Associated forest regimes, in which deforestation and reforestation patterns have evolved in recent times, and differing densities of settlement and cleared agricultural landscapes in each of these altitudinal zones, add to the environmental diversity of Nepal. Associated fauna and exotic species are in various states of endangerment especially Bengal tigers, one horned rhinos, wild elephants, crocodile, musk deer, and peasants, to name a few- so that their forested and mountainous habitats as ' Wild Life Reserves ' also deserve our attention, and are featured in this monograph ' s remit.

This book presents solutions to address water security in rapidly urbanizing cities, and explores the new paradigms of water security in changing contexts. Highlighting the latest developments in water research, changes in water policy, and current discourses on water security, the book also provides information and tools for local stakeholders, water managers, and policymakers to build the capacity for sustainable water governance. The book discusses a wide range of sustainable solutions and their implementation to ensure that the balance between water supply and demand remains sustainable in the long term, with a focus on local solutions to build capacity and developing policy awareness for a wide range of stakeholders. As the concept of urban water security in changing contexts is open to multiple interpretations, the authors set out various approaches. Providing an overview of the changing perspectives of urban water security in different contexts, the book is based on findings of the Asia-Pacific Network water security project at the United Nations University, Tokyo, as well as the authors' current research-based at Pokhara University, Nepal, Hosei University, Tokyo, Institute for the Global Environmental Strategies, Japan and the Australian National University, Australia. The book also includes the views of international authorities (such as water experts) on the subject. The solutions are complemented by analysis of case studies of various localized sustainable solutions at different scales. The book is a valuable resource for water professionals and policymakers around the globe, academics, teachers working in water-related areas, NGOs, think thanks, water research institutes, donor organizations, and international and local water utility services.

In March 2012, the Asian Development Bank (ADB) held the Subregional Workshop on Gender and Urban Poverty in South Asia to share experiences and enhance lateral learning among ADB and its project partners on addressing gender and social inclusion issues in urban development projects in Bangladesh, Bhutan, India, the Maldives, Nepal, and Sri Lanka. Participants included senior government officials, nongovernment organizations, community-based organizations, researchers, ADB urban and gender specialists, and representatives of international development agencies.This report presents the synthesis of knowledge, experiences, good practices, and recommendations shared at the forum with the aim of assisting ADB and its partner agencies in the planning of urban development projects to facilitate gender- and socially inclusive outcomes and reduce poverty in South Asia.

This publication reports the results of an exploratory study on civil society organization (CSO) engagement---particularly nongovernment organizations (NGOs) and community-based organizations (CBOs)---in Asian Development Bank (ADB) operations. The focus is on South Asia and the starting point of inquiry is on 33 projects that illustrate the roles and forms of NGO and CBO engagement in Bangladesh, Bhutan, India, Nepal, and Sri Lanka. The report includes a section on ADB technical assistance and grant projects. Another section presents other potential areas of CSO engagement such as in project planning stages, development and evaluation of the sector and country partnership strategies, and corporate policy and strategy discussions. The concluding section puts forward challenges and areas of innovation that may be considered in collaborating with NGOs with the aim of enhancing the quality of ADB development efforts.

Doctoral Thesis / Dissertation from the year 2018 in the subject Geography / Earth Science - Physical Geography, Geomorphology, Environmental Studies, , language: English, abstract: The study aims to explore the impact of the Melamchi Water Supply Project (MWSP) with the local people of study areas. It was conducted in 8 village development committees of Sindhupalchowk district which were more affected by the Project. A total of 404 respondents were selected randomly and details interviews/surveys done. The study had developed three major research hypotheses. The study concluded that MWSP had contributed in the field of agriculture, improving the economic status of the community, education, infrastructure development and off-seasonal vegetable farming for income-generating activities. There was a significant difference between the respondents of different VDCs regarding their experiences of the contribution of MWSP in environmental management and community development. The Social Upliftment Program of MWSP should be continued and needed to be extended in other hard-to-reach areas of the district. The project should focus to involve of public in all four levels of participation: inform, involve, consult, and collaborate. MWSP should focus more to increase the number of participation in direct or indirect involvement of the public in planning, implementation, and supervision of project activities. The community should feel that MWSP was for them; was working for the betterment of the community with the support of the community. There is a need for capacity mapping so that MWSP should share the findings and could encourage the public, to contribute in community development by using their local resources and capacities. Keywords: Collaborate, Consult, Environment, Impact, Inform, Involve, Management, Participation

Nepal is a post-conflict state seeking to formalize democracy in a challenging environment. Significant headway toward a new state has been made since the 2006 peace accord. Progress on a range of technical issues (including public financial management, monetary policy, and financial sector supervision) has also been achieved. However, the failure of the constituent assembly to meet an end-May 2012 deadline to ratify a new constitution is a serious setback, and a major impediment to macroeconomic management and prospects for growth. The subsequent dismissal of the constituent assembly in June 2012 has left day-to-day operations in the hands of a caretaker government. New elections are notionally slated for April 2013, but will require fractured political parties to agree on an interim consensus government. In the meantime, key articles of legislation (such as the government budget) have been delayed. More broadly, the lack of a consensus government and functioning parliament appear to be dampening investment (foreign and domestic), keeping potential donor support at bay, and undermining prospects for sensitive financial sector and state enterprise reforms.

This publication presents a gender equality and social inclusion (GeSi) analysis of six priority sectors in Nepal: agriculture and natural resources management, energy, skills development, urban development, transport and water, and sanitation and hygiene. The publication identifies practical ways in which gender equality, social inclusion, and women ' s empowerment approaches can be integrated into each of these sectors. The diagnostic aims to inform the GeSi initiatives of the Government of Nepal, the Asian development Bank, and other development partners of the country.
