e-Brochures In keeping with our ongoing measures for environmentally-responsible standards, OOCL has extended its commitment to the "paperless office" by posting sales and information materials online in electronic form, reducing the demand for pulp and paper products and chemical inks.

OOCL - e-Brochures
Brochures are promotional documents, primarily used to introduce a company, organization, products, or services and inform potential customers or members of the public of the benefits. They are usually distributed inside newspapers, handed out personally, or placed in brochure racks in high traffic locations.

Key Differnce – Catalogue vs Brochure Both catalogues and brochures offer some information about a company, its products and services. However, there is a difference between catalogue and brochure; a catalogue is a booklet or leaflet that has a complete list of items in a systematic order whereas brochure is a small booklet that contains information and pictures about a service or product.

The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographic index. 144 photographs and illustrations. Free of charge in digital PDF format.

This volume describes recent market dynamics and gives a detailed overview of the globalisation of the information and communication technology (ICT) sector and the rise of ICT-enabled international sourcing.

This is a comprehensive review of research related to construction informatics, with a particular focus on the related 5th framework EU projects on product and process technology and the implementation of the new economy technologies and business models in the construction industry.

A groundbreaking Virtual Reality textbook is now even better Virtual reality is a very powerful and compelling computer application by which humans can interface and interact with computer-generated environments in a way that mimics real life and engages all the senses. Although its most widely known application is in the entertainment industry, the real promise of virtual reality lies in such fields as medicine, engineering, oil exploration and the military, to name just a few. Through virtual reality scientists can triple the rate of oil discovery, pilots can dogfight numerically-superior "bandits," and surgeons can improve their skills on virtual (rather than real) patients. This Second Edition of the first comprehensive technical book on the subject of virtual reality provides updated and expanded coverage of the technology--where it originated, how it has evolved, and where it is going. The authors cover all of the latest innovations and applications that are making virtual reality more important than ever before, including: * Coverage on input and output interfaces including touch and force feedback * Computing architecture (with emphasis on the rendering pipeline and task distribution) * Object modeling (including physical and behavioral aspects) * Programming for virtual reality * An in-depth look at human factors issues, user performance, and * sensorial conflict aspects of VR * Traditional and emerging VR applications The new edition of Virtual Reality Technology is specifically designed for use as a textbook. Thus it includes definitions, review questions, and a Laboratory Manual with homework and programming assignments. The accompanying CD-ROM also contains video clips that reinforce the topics covered in the textbook. The Second Edition will serve as a state-of-the-art resource for both graduate and undergraduate students in engineering, computer science, and other disciplines. GRIGORE C. BURDEA is a professor at Rutgers-the State University of New Jersey, and author of the book Force and Touch Feedback for Virtual Reality, also published by Wiley. PHILIPPE COIFFET is a Director of Research at CNRS (French National Scientific Research Center) and Member of the National Academy of Technologies of France. He authored 20 books on Robotics and VR translated into several languages.

This study develops and applies a rigorous methodology to estimate the incidence of counterfeit and pirated items in world trade.
