In questo libro (aggiornato nel 2019) si trattano: la sicurezza delle informazioni, i relativi processi di valutazione e trattamento del rischio (con un'ampia parte teorica bilanciata da molti esempi), i controlli di sicurezza. Il testo si basa sulle norme ISO/IEC 27001 e ISO/IEC 27002, secondo interpretazioni maturate durante i lavori di scrittura della norma stessa a cui l'autore ha partecipato. Le appendici riportano brevi presentazioni (sulla gestione degli auditor, sulla certificazione ISO/IEC 27001, sui Common Criteria e sulle FIPS 140) e delle check list (per la gestione dei cambiamenti, l'identificazione delle minacce e i contratti con i fornitori).

Walk seminars, business leaders come to realize that teams are more powerful than the sum of the individuals and to recognize their people as appreciating assets. Servant Leader summarizes the Four Dimensions of Leadership: the head (leadership assumptions and methods) the hands (application and leadership behavior) the heart (edging God out) the habits (solitude, prayer, study of scripture, unconditional love, etc.) The thousands who have attended his seminars witnessed the transforming power of this unconventional approach. Readers seeking to grow as leaders and business executives will find Servant Leader nothing short of life-changing.

Today's unprecedented growth of data and their ubiquity in our lives are signs that the data revolution is transforming the world. And yet much of the value of data remains untapped. Data collected for one purpose have the potential to generate economic and social value in applications far beyond those originally anticipated. But many barriers stand in the way, ranging from misaligned incentives and incompatible data systems to a fundamental lack of trust. World Development Report 2021: Data for Better Lives explores the tremendous potential of the changing data landscape to improve the lives of poor people, while also acknowledging its potential to open back doors that can harm individuals, businesses, and societies. To address this tension between the helpful and harmful potential of data, this Report calls for a new social contract that enables the use and reuse of data to create economic and social value, ensures equitable access to that value, and fosters trust that data will not be misused in harmful ways. This Report begins by assessing how better use and reuse of data can enhance the design of public policies, programs, and service delivery, as well as improve market efficiency and job creation through private sector growth. Because better data governance is key to realizing this value, the Report then looks at how infrastructure policy, data regulation, economic policies, and institutional capabilities enable the sharing of data for their economic and social benefits, while safeguarding against harmful outcomes. The Report concludes by pulling together the pieces and offering an aspirational vision of an integrated national data system that would deliver on the promise of producing high-quality data and making them accessible in a way that promotes their safe use and reuse. By examining these opportunities and challenges, the Report shows how data can benefit the lives of all people, particularly poor people in low- and middle-income countries. .

The Framework focuses on using business drivers to guide cybersecurity activities and considering cybersecurity risks as part of the organization's risk management processes. The Framework consists of three parts: the Framework Core, the Implementation Tiers, and the Framework Profiles. The Framework Core is a set of cybersecurity activities, outcomes, and informative references that are common across sectors and critical infrastructure. Elements of the Core provide detailed guidance for developing individual organizational Profiles. Through use of Profiles, the Framework will help an organization to align and prioritize its cybersecurity activities with its business/mission requirements, risk tolerances, and resources. The Tiers provide a mechanism for organizations to view and understand the characteristics of their approach to managing cybersecurity risk, which will help in prioritizing and achieving cybersecurity objectives.
