Analysis - Malaria is a risk to three quarters of the population in the Southern African Development Community, a 16-member organisation that draws in countries across southern and eastern Africa.

This is the third and completely revised edition of a now classic handbook that focuses specifically on management challenges faced by research scientists and technical professionals. In Lab Dynamics, Carl and Suzanne Cohen draw on their unparalleled professional experience (Carl as a scientist and Suzanne as a psychologist) and as workshop directors to provide invaluable, practical advice on how to succeed in science for working scientists and those in or preparing for management or leadership roles. The book is also required reading for anyone with an administrative role in the research enterprise who must understand that world and its complexities. At its core, the book is about human interactions in science and how they can be made most effective and productive. The authors explain, without jargon or preaching, how to apply self-awareness and interpersonal skills to problems that science professionals encounter every day. For this third edition, two new chapters have been added. The new Chapter 4, on hiring scientists, provides a data-driven approach along with step-by-step guidance and editable and downloadable forms for use in evaluating and ranking applicants. The new Chapter 6 gives a guide to keeping scientists focused and motivated through appropriate feedback. Scientists at all levels want and need to hear how they're doing from mentors, managers, or leaders. All other chapters have additional sections, many based on case studies and examples shared with the authors by working scientists. They include "Ten essential characteristics of scientific team leaders" with specific examples of each behavior and its impact. Government organizations, academic institutions, and funders are increasingly focused on the management of science and the improvement of the scientific enterprise. With this update, Lab Dynamics is a resource like no other for those who lead and strive to succeed in a scientific setting.

Lab Dynamics is a book about the challenges of doing science and dealing with the individuals involved, including oneself. This book addresses a subject of direct importance to lab heads, postdocs, students, and managers concerned about improving the effectiveness of academic and industrial research.

First Published in 2003. Routledge is an imprint of Taylor & Francis, an informa company.

This book introduces and explores a new genre, lab lit. Essays both discuss lab lit novels using a variety of analytical approaches as well as provide a theoretical framework to explore the social and literary backgrounds of the genre.

A clue hidden in a toy ship leads Tintin on a dangerous treasure hunt.

Leadership and management are general skills that apply in most walks of life, but in the scientific domain they require some special characteristics. Science thrives on challenge, whether it is the technical challenge of trying to do something which has not been done before or challenging a widely held but poorly supported hypothesis. Scientists are trained to challenge, and for the manager of science this can itself be a challenge. In the past, when science was on a much smaller scale and less subject to public scrutiny, a less formal 'back-of-the-envelope' management style was acceptable, but those days are long-gone. Science costs much more and is rightly more accountable. Excellent scientists, however, do not necessarily make good managers and may not make good leaders. Nevertheless, like all skills, leadership and management can be enhanced and developed and even instinctively good managers can improve. While the science of management and leadership is well developed, the management and leadership of science is less so. This book aims to introduce the working research scientist to the art and techniques of management and the skills necessary to be a good and effective manager and leader of science and scientists. This includes understanding the organization and functioning of scientific research establishments (universities, laboratories, research councils, etc.) and how to deal with the associated committee work, recruiting, and team building; how to deal with difficulties managing projects and handling risks. The approach is pragmatic not dogmatic. Leadership and management are people skills, and each person is different and needs to be treated differently. The focus is on the principle and practice. While the subject is serious, the approach is conversational, with anecdotes and practical examples.

This book examines the impact of CEOs on firm performance and focuses on their role in science-based innovation to answer the question, is it possible to lead highly complex R&D projects and innovation that you do not understand? Today, science and technology move so fast that even managers of R&D teams can become quickly disconnected from new developments. Similarly, business leaders may be required to lead organisations with technical knowledge beyond their own expertise. How to manage teams and retain respect and influence is a recognised challenge. Filled with insight from managers and CEOs in science and technology organisations, the book unlocks the skills required to balance the leadership and managerial needs of the organisation, motivate the technical teams and drive successful innovation in new product development environments. Due to the vital role played by experts in a chosen field of technical and scientific expertise, the book also describes what these specialists need and expect from their leaders. The book is required reading for managers in high tech and scientific environments – the CEO, CSO and the R&D manager. It can also be used as a classroom reference book on the management skills required for leading high-tech projects.

BEST: Implementing Career Development Activities for Biomedical Research Trainees provides an instructional guide for institutions wanting to create, supplement or improve their career and professional development offerings. Each chapter provides an exclusive perspective from an administrator from the 17 Broadening Experiences in Scientific Training (BEST) institutions. The book can aid institutions who train graduate students in a variety of careers by teaching faculty and staff how to create and implement career development programming, how to highlight the effectiveness of offerings, how to demonstrate that creating a program from scratch is doable, and how to inform faculty and staff on getting institutional buy-in. This is a must-have for graduate school deans and faculty and staff who want to implement and institutionalize career development programming at their institutions. It is also ideal for graduate students and postdocs. Provides an instructional guide for institutions wanting to create or supplement their career and professional development offerings Contains perspectives from administrators from the 17 Broadening Experiences in Scientific Training (BEST) institutions Addresses what graduate students and postdoctoral populations can implement now to help broaden career outcomes

#1 NEW YORK TIMES BESTSELLER • Brené Brown has taught us what it means to dare greatly, rise strong, and brave the wilderness. Now, based on new research conducted with leaders, change makers, and culture shifters, she 's showing us how to put those ideas into practice so we can step up and lead. Look for Brené Brown 's new podcast, Dare to Lead, as well as her ongoing podcast Unlocking Us! NAMED ONE OF THE BEST BOOKS OF THE YEAR BY BLOOMBERG Leadership is not about titles, status, and wielding power. A leader is anyone who takes responsibility for recognizing the potential in people and ideas, and has the courage to develop that potential. When we dare to lead, we don 't pretend to have the right answers; we stay curious and ask the right questions. We don 't see power as finite and hoard it; we know that power becomes infinite when we share it with others. We don 't avoid difficult conversations and situations; we lean into vulnerability when it 's necessary to do good work. But daring leadership in a culture defined by scarcity, fear, and uncertainty requires skill-building around traits that are deeply and uniquely human. The irony is that we 're choosing not to invest in developing the hearts and minds of leaders at the exact same time as we 're scrambling to figure out what we have to offer that machines and AI can 't do better and faster. What can we do better? Empathy, connection, and courage, to start. Four-time #1 New York Times bestselling author Brené Brown has spent the past two decades studying the emotions and experiences that give meaning to our lives, and the past seven years working with transformative leaders and teams spanning the globe. She found that leaders in organizations ranging from small entrepreneurial startups and family-owned businesses to nonprofits, civic organizations, and Fortune 50 companies all ask the same question: How do you cultivate braver, more daring leaders, and how do you embed the value of courage in your culture? In this new book, Brown uses research, stories, and examples to answer these questions in the no-BS style that millions of readers have come to expect and love. Brown writes, " One of the most important findings of my career is that daring leadership is a collection of four skill sets that are 100 percent teachable, observable, and measurable. It 's learning and unlearning that requires brave work, tough conversations, and showing up with your whole heart. Easy? No. Because choosing courage over comfort is not always our default. Worth it? Always. We want to be brave with our lives

and our work. It ' s why we ' re here. " Whether you ' ve read Daring Greatly and Rising Strong or you ' re new to Brené Brown ' s work, this book is for anyone who wants to step up and into brave leadership.
