Ultramarine is a deep blue color pigment which was originally made by grinding lapis lazuli into a powder. The name comes from the Latin *ultramarinus*, literally "beyond the sea", because the pigment was imported into Europe from mines in Afghanistan by Italian traders during the 14th and 15th centuries. Ultramarine was the finest and most expensive blue used by Renaissance painters. It was often used for the robes of the Virgin Mary, and symbolized holiness and humility. It remained an extremely

"This book examines the history of the first glass, from its early sporadic occurrence, through the height of its production in the late second millennium BC, to its disappearance at the end of that millennium. It draws on an exceptionally wide range of sources including ancient texts detailing recipes and trade in glass, iconographic depictions in tombs and temples, archaeological excavation of the most important sites [including Amarna and Qantir], and the description of the glass objects themselves. The area covered includes the heart of glassmaking and use in Egypt and the Near East, and to a lesser extent those areas were [sic] glass might have been traded, for example the Levant and the Mycenaean Aegean. It also considers the life of the glassmaker, his or her place in society and relationship to other industries"--P. [4] of cover.

A large number of Aramaic inscriptions from the 9th century B.C. to the 3rd century A.D. are revisited in this fourth volume of Studies. After the stele of Tel Dan, the epitaph of Kuttamuwa from Zincirli,

Online Library Lapis Lazuli From The Kiln Gl And Glmaking In The Late Bronze Age Studies In Archaeological Sciences

and the inscription found at Tepe Qalaichi, Aramaic dockets from Dur-Katlimmu are re-examined, distinguishing a court ruling concerning theft, agreements regarding mortgage, guarantee, indemnity, barley and silver loans, and the particular nsk-loan. Next are examined "cadastral" reports from Idumaea, some inscriptions from Hellenistic times, a divorce bill from the Roman period, several Palmyrene dedications, epitaphs, and honorific inscriptions, as well as some Hatraean texts, mainly related to Adiabene. Finally, Mercionism is considered as background of a saying on "two gods," ascribed to Rabbi Hiyya bar Abba. Like in the preceding volumes of Studies, detailed indexes list the inscriptions, the personal names and the place-names examined, as well as other subjects.

The Ancient Near East reveals three millennia of history (c. 3500–500 bc) in a single work. Liverani draws upon over 25 years' worth of experience and this personal odyssey has enabled him to retrace the history of the peoples of the Ancient Near East. The history of the Sumerians, Hittites, Assyrians, Babylonians and more is meticulously detailed by one of the leading scholars of Assyriology. Utilizing research derived from the most recent archaeological finds, the text has been fully revised for this English edition and explores Liverani's current thinking on the history of the Ancient Near East. The rich and varied illustrations for each historical period, augmented by new images for this edition, provide insights into the material and textual sources for the Ancient Near East. Many highlight the ingenuity and technological prowess of the peoples in the Ancient East. Never before available in English, The Ancient Near East represents one of the greatest books ever written on the subject and is a must read for students who will not have had the chance to explore the depth of Liverani's scholarship.

This is the first systematic attempt to survey in detail the archaeological evidence for the crafts and craftsmanship of the Sumerians, Babylonians, and Assyrians in ancient Mesopotamia, covering the period ca. 8000-300 B.C.E. As creators of some of the earliest farming and urban communities known to us, these people were among the first pioneers of many crafts and skills that remain fundamental to modern ways of life. Many of the raw materials for crafts had to be imported from outside the river valley of the Tigris and Euphrates, providing an unusually sensitive indicator of the commercial and cultural contacts of Mesopotamia. In this book, Dr. Moorey reviews briefly the textual evidence, and then goes on to examine in detail the material evidence for a wide range of crafts using stones, both common and ornamental, animal products--from hippopotamus ivory to ostrich egg-shells--ceramics, glazed materials and glass, metals, and building materials. With a comprehensive bibliography, this will be a key work of reference for archaeologists and those interested in the early history of crafts and technology, as well as for specialist historians of the ancient Near East.

Online Library Lapis Lazuli From The Kiln GI And GImaking In The Late Bronze Age Studies In Archaeological Sciences

"In The Meaning of Color in Ancient Mesopotamia, Shiyanthi Thavapalan offers the first in-depth study of the words and expressions for colors in the Akkadian language (c. 2500-500 BCE). By combining philological analysis with the technical investigation of materials, she debunks the misconception that people in Mesopotamia had a limited sense of color and convincingly positions the development of Akkadian color language as a corollary of the history of materials and techniques in the ancient Near East"--

This book is an interdisciplinary exploration of archaeological glass in which technological, historical, geological, chemical, and cultural aspects of the study of ancient glass are combined. The book examines why and how this unique material was invented some 4,500 years ago and considers the ritual, social, economic, and political contexts of its development. The book also provides an in-depth consideration of glass as a material, the raw materials used to make it, and its wide range of chemical compositions in both the East and the West from its invention to the seventeenth century AD. Julian Henderson focuses on three contrasting archaeological and scientific case studies: Late Bronze Age glass, late Hellenistic-early Roman glass, and Islamic glass in the Middle East. He considers in detail the provenances of ancient glass using scientific techniques and discusses a range of vessels and their uses in ancient societies.

This book is a must for everyone interested in glass, especially artisans and collectors.

This short volume discusses a group of glass objects kept in the British Museum that date to the Egyptian New Kingdom (1550–1069 BC) and are commonly referred to as 'ear plugs' or 'ear studs'. Ancient Egyptian ear studs from variety of materials appear in the archaeological record and are usually depicted as worn with a convex dome to the front. However, there is evidence to suggest that the glass objects discussed in this volume, and which are similar, but not equal, in shape to ear studs, were not designed as ear jewelry, but that they actually functioned as beads. The objects are flat-fronted and pierced latitudinally. The piercing, which is related to the manufacture of the objects on a metal rod, would have enabled the objects to be threaded and to be suspended vertically, either as parts of garments or as parts of bead chains.

This volume focuses specifically on the applications, possibilities, and limitations of handheld X-ray fluorescence devices in art conservation and archaeology.

The Ancient Near East embraces a vast geographical area, from the borders of Iran and Afghanistan in the east to the Levant and Anatolia, and from the Black Sea in the north to Egypt in the south. It was a region of enormous cultural, political and linguistic diversity. In this authoritative new study, Amélie Kuhrt examines its

Online Library Lapis Lazuli From The Kiln Gl And Glmaking In The Late Bronze Age Studies In Archaeological Sciences

history from the earliest written documents to the conquest of Alexander the Great, c.3000-330 BC. This work dispels many of the misapprehensions which have surrounded the study of the region. It provides a lucid, up-to-date narrative which takes into account the latest archaeological and textual discoveries and deals with the complex problems of interpretation and methodology. The Ancient Near East is an essential text for all students of history of this region and a valuable introduction for students and scholars working in related subjects. Winner of the AHO's 1997 James Henry Breasted Award.
