Research in Science Education (RISE) Volume 6, Research Based Undergraduate Science Teaching examines research, theory, and practice concerning issues of teaching science with undergraduates. This RISE volume addresses higher education faculty and all who teach entry level science. The focus is on helping undergraduates develop a basic science literacy leading to scientific expertise. RISE Volume 6 focuses on research-based reforms leading to best practices in teaching undergraduates in science and engineering. The goal of this volume is to provide a research foundation for the professional development of faculty teaching undergraduate science. Such science instruction should have short- and longterm impacts on student outcomes. The goal was carried out through a series of events over several years. The website at <http://nseus.org> documents materials from these events. The international call for manuscripts for this volume requested the inclusion of major priorities and critical research areas, methodological concerns, and results of implementation of faculty professional development programs and reform in teaching in undergraduate science classrooms. In developing research manuscripts to be reviewed for RISE, Volume 6, researchers were asked to consider the status and effectiveness of current and experimental practices for reforming undergraduate science courses involving all undergraduates, including groups of students who are not always well represented in STEM education. To influence practice, it is important to understand how researchbased practice is made and how it is implemented. The volume should be considered as a first step in thinking through what reform in undergraduate science teaching might look like and how we help faculty to implement such reform.

A wise and witty collection of short stories explores a world of love and loss, desire and longing, as it examines key moments in people's efforts to understand the paths their lives have taken, from a seventy-year-old retired doctor trying to teach his teenage son how to drive, to a woman who receives a phone call from the father she never knew. A first collection. Reprint. 10,000 first printing.

From Anthony and Agatha Award-winning author of the Dead-End Job mysteries—a gritty series featuring a no-nonsense female journalist who follows her stories wherever they may lead...especially if they lead to big trouble. Columnist Francesca Vierling thought she had it

tough dealing with the cutthroat office politics at the St. Louis City Gazette. But stressors in the newsroom reach new heights when her dear mentor Georgia is diagnosed with cancer and Francesca offers to hide her illness from their boorish boss. When Francesca goes to pick up Georgia from treatment, she is horrified to find the staff shot dead and a distraught Georgia the only survivor. The crime is bloody, shocking, sensational—and just the kind of story that would allow Francesca to break free from her oppressive employers. All she has to do is solve the crime. The story quickly grows out of control when a doctor is killed in the same building as the massacre. And then another. And another... Because the killer isn't just out for blood—they're out for revenge. And Francesca is about to get in their way... Note: The author has made some minor revisions to the original text for this edition of the book.

Psychologists and philosophers have long grappled with the mysteries of dreaming, and now—thanks largely to recent innovations in brain imaging—neuroscientists are starting to join the conversation. In this groundbreaking book, award-winning journalist Andrea Rock traces the brief but fascinating history of this emerging field. She then takes us into modern sleep labs across the country, asking the questions that intrigue us all: Why do we remember only a fraction of our dreams? Why are dreams usually accompanied by intense emotions? Can dreams truly spark creative thought or help solve problems? Are the universal dream interpretations of Freud and Jung valid? Accessible and engaging, *The Mind at Night* shines a bright light on our nocturnal journeys and tells us what the sleeping mind reveals about our waking hours.
