This is the first of a series of books describing exciting birdwatching locations in Australia. The NSW-ACT Guide is arguably the most comprehensive compendium of birding sites in the State available to date. Not only the standard, well-known locations are covered but also some interesting places known only to a few or newly discovered by ourselves. The book series is intended for both Australian and overseas birders. We hope it will become an essential field companion to a birding enthusiast. In today's time-poor society, the ability to maximise your bird finds in an unfamiliar area in a typically short vacation time available, should be a serious help. For each site, at the minimum, the access details, habitat description, site facilities and key avifauna are addressed. Most data is based on personal records, cross-checked and augmented with the verified sightings reported online. The book is divided into regions including greater Sydney, Hawkesbury, Hunter region, Illawarra, Southern Highlands, South-East NSW, Mid North Coast, Northern Rivers, Western Slopes and Tablelands, Riverina region, Central West NSW, Far West NSW and Australian Capital Territory. The book is richly illustrated with photographs of birds and bird habitats. Book 2: Australian Good Birding Guide: Tasmania Book 3: Australian Good Birding Guide: Victoria

and User's Guide Abdominal ultrasound examinations are now performed mainly with real-time instrumentation, thereby giving the user tremendous flexibility in the manner in which the examination is conducted. However, with such flexibility come significant problems as well. Because fields of view are small, and because the operator can readily move the probe anywhere in the abdomen to see structures in a variety of planes and sections, it is relatively easy to become disoriented or to miss significant findings unless the examination protocol is carefully devised. The operator must approach the task of scanning the patient in a logical and organized way that is related to the patient's clinical findings as well as to the findings discovered during the ultrasound examination. This book has been written to assist the operator in performing an organized and directed ultrasound examination by providing in outline form a sequential approach to the scanning of abdominal organs and regions. This approach has several functions: 1) to indicate the structures within the organ or region that should be scanned; 2) to suggest other regions to examine if abnormalities within the initially imaged structures are detected; and 3) to suggest differential diagnostic possibilities when abnormalities are seen.
