This report examines how land is governed in France. It describes the laws, policies and practices that shape spatial and land-use planning in the country as a whole, and provides a detailed assessment of Clermont-Ferrand and Nantes Saint-Nazaire.

Landscape architecture and photography are closely interrelated, since the former is a constantly evolving thing that can be captured in stills, even eternalized, by photography. What role does photography play in landscape design? How does photography create a new context for landscape? The book investigates such questions in nine essays by North-American and French scientists, using landscape designs that were created from the 1950s to today.

Extreme Wildfire Events and Disasters: Root Causes and New Management Strategies highlights the urgent need for new methods to prepare and mitigate the effects of these events. Using a multidisciplinary, socio-ecological approach, the book discusses the roots of the problem, presenting a new, innovative approach to wildfire mitigation based on the operational concept of Fire Smart Territory (FST). Under the guidance of its expert editors, the book highlights new ways to prevent and respond to extreme wildfire events and disasters through sustainable development, thus revealing better management methods and increasing protection of both the natural environment and the vulnerable communities within it. Reveals the complexity of extreme wildfire events and disasters in an accessible, comprehensive and multidisciplinary way Reviews the ground-breaking concept of Fire Smart Territory (FST) which offers an opportunity to reduce wildfire occurrence and severity through measures that promote sustainable development Proposes a new perspective on disaster risk reduction to help researchers, planners and professionals successfully adapt their methods for mitigating current and future issues

First published in 1991. Routledge is an imprint of Taylor & Francis, an informa company.

The governance of seas and oceans, defined as all forms of social participation in decision-making on the marine environment, is here mainly from a legal perspective view with the Law of the Sea as a determinant. The book presents the main aspects of maritime law and the history of its construction. The exploitation of living resources, minerals and marine energy reserves, maritime transport, marine ecosystems disturbance by a vessel traffic constantly increasing, are included.

Presently, peri-urbanisation is one of the most pervasive processes of land use change in Europe with strong impacts on both the environment and quality of life. It is a matter of great urgency to determine strategies and tools in support of sustainable development. The book synthesizes the results of PLUREL, a large European Commission funded research project (2007-2010). Tools and strategies of PLUREL address main challenges of managing land use in peri-urban areas. These results are presented and illustrated by means of 7 case studies which are at the core of the book. This volume presents a novel, future oriented approach to the planning and management of peri-urban areas with a main focus on scenarios and sustainability impact analysis. The research is unique in that it focuses on the future by linking quantitative scenario modeling and sustainability impact analysis with qualitative and in-depth analysis of regional strategies, as well as including a study at European level with case study work also involving a Chinese case study.

This book focuses on the challenges people face in managing agricultural crops, aquaculture, fisheries and related ecosystems in inland areas of coastal zones in the tropics of Asia, Africa, Australia and South America. These challenges can create conflicts in the use of natural resources between different stakeholders. Through many case studies, the book discusses the nature of the conflicts and identifies what is known and not known about how to manage them. For example, some case studies relate to the trade-offs between enhancing agricultural production by constructing embankments to keep out saline water and maintaining not only the variety of rural livelihoods but also brackish aquatic biodiversity. Other case studies provide the lessons learnt from the conversion of mangrove forests to shrimp farms.

The effects of tourism on the ecology and natural environment of tourist destinations are hotly debated and research has expanded in the field of ecotourism and sustainability. This book considers the positive contributions that tourism can make to the conservation of global biodiversity by reviewing and analysing the economic and political contributions of tourism to conservation through establishment of private game and wildlife reserves, lodges and tourist facilities. Featuring 100 international case studies from private marine reserves to bird watching lodges, this book covers key topics including sources of capital and operational funding, corporate and organisational structure, marketing strategies, primary conservation outcomes and spin-off effects, links to public protected areas, future plans and global trends.

The last twenty years has seen a proliferation of the term "tourist destination." Improbable places, such as industrial cities and isolated rural environments have become legitimate places to visit. At the same time, traditional tourist destinations such as coastal resorts have declined inpopularity. There is a shift from "old" to "new" tourism. These case histories examine these issues. The book is divided into three sections, dealing with political, economic and sociocultural reasons for change.

Aquaculture now provides more than 50% of the global supply of fisheries products for direct human consumption. This workshop proceedings discusses critical economic, environmental and social aspects of aquaculture.
