The Greeks have been a maritime nation since antiquity, as the mountainous landscape of the mainland, and the limited farming area and the extended coastline of Greece led people to shipping. The geographical position of the region on the crossroads of ancient sea lanes in the eastern Mediterranean, the multiplicity of islands and the proximity to other advanced civilizations helped shape the maritime nature of the Greek nation at an early stage.

This book provides the reader with a better understanding of the One Belt One Road (OBOR) initiative, its various projects around the world, and its consequences at a local as well as an international level. Background information on both Chinese and Greek sociopolitical history and their maritime industry is provided. The book also provides readers with the opinions of people directly involved with the Piraeus Port—China Ocean Shipping (Group) Company (COSCO) deal through interviews conducted and included in the book. OBOR, a signature initiative of Chinese President Xi Jinping, is currently one of the most frequently discussed enterprises worldwide. This controversial mix of worldwide projects has put both China and Xi at the center of attention, and not in a positive way. Of course, not all projects included in the initiative have been or are likely to be successful, but the initiative has far-ranging economic, cultural, and political potential. OBOR, in its essence, is an attempt by the Chinese government to secure a paramount position in global finance for the country and ensure that primacy extends far into the future. In particular, it is an attempt to ensure that there are enough natural resources for China to support itself in the long term. Therefore, the areas selected for the implementation and development of OBOR are deliberately strategic. One of the countries that China has chosen to invest in is Greece, specifically the Port of Piraeus. The OBOR initiative has many similarities with the ancient Silk Road. Although the ancient route and modern concept are in no way identical, many similarities become evident when the two are compared. To understand China ' s motivation to build such a network, looking back at history is required. This project was long in the making. Various discussions took place both on an international and a domestic level until all parties came to an agreement. The deal at Piraeus between Greece and China affected more people than the politicians and the shipowners—it affected everyone involved in the operations of the port as well as the residents of the area. To further comprehend the impact on their lives, one must see things through their eyes, and there is no better way than contacting individuals and conversing with them. In conclusion, the specific deal at Piraeus and the OBOR initiative as a whole have the potential of benefiting the international and local communities. However, specific measures must be taken, and governments must collaborate in order for the deal in Piraeus and the OBOR initiative to have the most beneficial and the least negative impact.

The Greek ship-operating industry has been at the top of the world fleet for the last twenty years, a period which has witnessed the final collapse of the great maritime powers of the past. Gelina Harlaftis' comprehensive study provides insight into the successful course of the Greek maritime industry through the past two centuries. A History of Greek-Owned Shipping overturns the perception that the success of the industry was simply due to a handful of entrepreneurs in the 1940s using flags of convenience. The excellence of the Greek tramp fleet has its foundation in networks and organisational structures which were already in place in the nineteenth century. These networks, the access to world markets, the cargoes carried, the routes followed and the interests served are fully analysed in this survey. Gelina Harlaftis establishes the main trends in the development of the fleet; she raises important questions about the success of the Greek merchant marine.

The Nordic countries have played a key role in shipping for over a century, but have had to contend with declining employment and loss of markets over the last fifty years. Globalization has led to a series of new challenges and opportunities in the maritime industries - both the rules of the game and the playing field have changed. This book analyzes how shipping companies and authorities in Norway, Denmark, Sweden and Finland have adapted to these changes. It explains why important parts of Nordic shipping failed to respond effectively to the economic integration process, while other parts were able to exploit the global growth opportunities. By linking company strategies to changes in political and institutional frameworks, this book maps out the transformation of an entire industry.

This open access book belongs to the Maritime Business and Economic History strand of the Palgrave Studies in Maritime Economics book series. This volume highlights the contribution of the shipping industry to the transformations in business and society of the postwar era. Shipping was both an example and an engine of globalization and structural change. In turn, the industry experienced and pioneered, mirrored and enabled key developments that led to the present-day globalized economy. Contributions address issues such as the macro-level shift of shipping ' s centre of gravity from Europe to Asia, the political and legal frameworks within which it developed, the strategies and performance of both successful and unsuccessful firms, and the links between the shipping industry and the wider economy and society. Without shipping and its ability to forge connections and networks of a global reach, the modern world would look very different. By bringing together scholars from various disciplinary and national backgrounds, this book advances our understanding of the linkages that bind economies and societies together.
