Library and information science or "library and information studies" is a merging of library science and information science. The joint term is associated with schools of library and information science. In the last part of the 1960s, schools of librarianship, which generally developed from professional training programs to university institutions during the second half of the 20th century, began to add the term "information science" to their names. The first school to do this was at the Univers

of the creation, organisation, management, communication and use of recorded information in documents of all kinds, including new forms of digital and immersive documents.

The first of its kind, this book provides a theoretically informed research guide and draws attention to areas of potential research in Library and Information Science. It explores the nexus of theory and practice and offers suggestions for collaborative projects. The clear text, simple style and rich content make the book an invaluable resource for students, scholars and practicing librarians, as well as the general reader who may be interested in library and information science research. Apart from providing basic research tools, it acquaints librarians with a theoretical compass for dealing with digital media. It pays particular attention to the electronic media. Addresses topics of current interests in the field, such as user-centered services.

An essential resource for LIS master's and doctoral students, new LIS faculty, and academic librarians, this book provides expert guidance and practical examples based on current research about quantitative and qualitative research methods and design. Conducting research and successfully publishing the findings is a goal of many professionals and students in library and information science (LIS). Using the best methodology maximizes the likelihood of a successful outcome. This outstanding book broadly covers the principles, data collection techniques, and analyses of quantitative and qualitative methods as well as the advantages and limitations of each method to research design. It addresses these research methods and design by discussing the scientific method, sampling techniques, validity, reliability, and ethical concerns along with additional topics such as experimental research design, ethnographic methods, and usability testing. The book presents comprehensive information in a logical, easy-to-follow format, covering topics such as research strategies for library and information science doctoral students; planning for research; defining the problem, forming a theory, and testing the theory; the scientific method of inquiry and data collection techniques; survey research methods and questionnaires; analyzing quantitative data; interview-based research; writing research proposals; and even time management skills. LIS students and professionals can consult the text for instruction on conducting research using this array of tools as well as for guidance in critically reading and evaluating research publications, proposals, and reports. The explanations and current research examples supplied by discipline experts offer advice and strategies for completing research projects, dissertations, and theses as well as for writing grants, overcoming writer's block, collaborating with colleagues, and working with outside consultants. The answer to nearly any question posed by novice researchers is provided in this book. Now in its sixth edition, the book provides new and updated content that is even more comprehensive than before and contains added sections featuring the voices of prominent LIS scholars, researchers, and editors. "Voices of the Experts" text boxes provide researchers' advice on specific methods and identify what was most important or most valuable about using a particular method and software for analysis—e.g., NVivo, SurveyMonkey, and log capture. Written by coauthors with extensive expertise in research design, securing grant funding, and using the latest technology and data analysis software.

This book explores the development, trends and research of library and information sciences (LIS) in the digital age. Inside, readers will find research and case studies written by LIS experts, educators and theorists, most of whom have visited China, delivered presentations there and drafted their articles based on feedback they received. As a result, readers will discover the LIS issues and concerns that China and the international community have in common. The book first introduces the opportunities and challenges faced by the library and information literacy profession and discusses the key role of librarians in the

future of information literacy education. Next, it covers trends in LIS education by examining the vision of the iSchool movement and detailing its practice in Syracuse University. The book then covers issues in information seeking and retrieval by showing how visual data mining technology can be used to detect the relationship and pattern between terms on the Q&A of a social media site. It also includes a case study regarding tracing information seeking behavior and usage on a multimedia website. Next, the book stresses the importance of building an academic accreditation framework for scientific datasets, explores the relationship between bibliometrics and university rankings, and details the birth and development of East Asian Libraries in North America. Overall, the book offers readers insight into the changing nature of LIS, including the electronic dissemination of information, the impact of the Internet on libraries, the changing responsibilities of library professionals, the new paradigm for evaluating information, and characteristics and functions of today's library personnel.

Researchers are becoming increasingly concerned with tracking the impact and reach that their research has on the academic community. Through the implementation of altmetrics, they can now better measure the value that their research has through the analysis of citing behavior and citation-based research evaluation. *Measuring and Implementing Altmetrics in Library and Information Science Research* is a critical research book that focuses on how altmetrics can help researchers to uncover evidence of societal engagement, influence, and broader impacts that demonstrate the value of their research. It builds a more complete picture of the visibility and profile of individual researchers and observes real-time social media updates that provide insight into how faculty's research is being shared from the moment it is published. Featuring a range of topics such as citations, big data, and social media, this book is essential for researchers, educators, librarians, professionals, academicians, administrators, and students.

The seventh edition of this frequently adopted textbook features new or expanded sections on social justice research, data analysis software, scholarly identity research, social networking, data science, and data visualization, among other topics. It continues to include discipline experts' voices. The revised seventh edition of this popular text provides instruction and guidance for professionals and students in library and information science who want to conduct research and publish findings, as well as for practicing professionals who want a broad overview of the current literature. Providing a broad introduction to research design, the authors include principles, data collection techniques, and analyses of quantitative and qualitative methods, as well as advantages and limitations of each method and updated bibliographies. Chapters cover the scientific method, sampling, validity, reliability, and ethical concerns along with quantitative and qualitative methods. LIS students and professionals will consult this text not only for instruction on conducting research but also for guidance in critically reading and evaluating research publications, proposals, and reports. As in the previous edition, discipline experts provide advice, tips, and strategies for completing research projects, dissertations, and theses; writing grants; overcoming writer's block; collaborating with colleagues; and working with outside consultants. Journal and book editors discuss how to publish and identify best practices and understudied topics, as well as what they look for in submissions. Features new or expanded sections on social justice research; virtual collaboration, data collection, and dissemination; scholarly communication; computer-assisted qualitative and quantitative data analysis; scholarly identity research and guidelines; data science; and visualization of quantitative and qualitative data Provides a broad and comprehensive overview and update, especially of research published over the past five years Highlights school, public, and academic research findings Relies on the coauthors' expertise in research design, securing grant funding, and using the latest technology and data analysis software

Twenty-eight contributed papers provide an overview of LIS research, offering recommendations and strategies for resolving issues related to this research

Provides an understanding of Web search engines from the unique perspective of Library and Information Science. This book explores a range of topics including retrieval effectiveness, user satisfaction, the evaluation of search interfaces, the impact of search on society, and the influence of search engine optimization (SEO) on results quality.

This unique annotated bibliography is a complete, up-to-date guide to sources of information on library science, covering recent books, monographs, periodicals and websites, and selected works of historical importance.

In today's globalized world, viable and reliable research is fundamental for the development of information. Innovative methods of research have begun to shed light on notable issues and concerns that affect the advancement of knowledge within information science. Building on previous literature and exploring these new research techniques are necessary to understand the future of information and knowledge. The Handbook of Research on Connecting Research Methods for Information Science Research is a collection of innovative research on the methods and application of study methods within library and information science. While highlighting topics including data management, philosophical foundations, and quantitative methodology, this book is ideally designed for librarians, information science professionals, policymakers, advanced-level students, researchers, and academicians seeking current research on transformative methods of research within information science.
