Operators are a
way of packaging,
deploying, and
managing
Kubernetes
applications. A

File Type PDF Linux Academy

Kubernetes application doesn't just run on Kubernetes; it's composed and managed in Kubernetes terms. Operators add application-specific operational knowledge to a Kubernetes cluster, making it easier to automate complex,

File Type PDF Linux Academy

stateful applications and to augment the platform. Operators can coordinate application upgrades seamlessly, react to failures automatically, and streamline repetitive maintenance like backups. Think of

File Type PDF Linux Academy

Operators as site reliability engineers in software. They work by extending the Kubernetes control plane and API, helping systems integrators, cluster administrators, and application developers reliably deploy and

File Type PDF Linux Academy

manage key services and components. Using real-world examples, authors Jason Dobies and Joshua Wood demonstrate how to use Operators today and how to create Operators for your applications with the Operator

File Type PDF Linux Academy

Framework and
SDK. Learn how to
establish a
Kubernetes cluster
and deploy an
Operator Examine
a range of
Operators from
usage to
implementation
Explore the three
pillars of the
Operator
Framework: the

File Type PDF Linux Academy

Operator SDK, the
Operator Lifecycle
Manager, and
Operator Metering
Build Operators
from the ground up
using the Operator
SDK Build,
package, and run
an Operator in
development,
testing, and
production phases
Learn how to

File Type PDF Linux Academy

distribute your
Operator for
installation on
Kubernetes
clusters

- > Covers Red Hat Enterprise Linux 8
- > Covers ALL official exam objectives for the RHCSA exam based on Red Hat Enterprise Linux 8
