To meet the challenges facing the Army, the Army needs predictor measures that will enhance entry-level Soldier selection and classification. One of the purposes of the Army Research Institute for Behavioral and Social Sciences (ARI's) Army Class project is to provide the Army with recommendations on which predictor measures, in particular measures of non-cognitive attributes (e.g., interests, values, and temperament), demonstrate the greatest potential to inform entry-level Soldier selection and classification decisions. The present report documents the development of criterion measures to assist in these analyses. A second purpose of the Army Class project is to develop and pilot job knowledge tests (JKTs) that can be used to aid reclassification decisions. If Soldiers are shown to possess critical knowledge, skills, and attributes (KSAs) for their new jobs, this could reduce training requirements and increase force readiness. This report documents the development of reclassification JKT test items.

This United States Army manual, Army Techniques Publication ATP 5-0.2-1 Staff Reference Guide Volume I Unclassified Resources December 2020, provides staff members with a reference guide to assess, plan, prepare, and execute operations in large-scale combat operations. The guide provides a consolidated location for key planning tools and example techniques to help staff members perform their duties. Most of this guide's content is contained in other, more in-depth doctrinal publications, which are referenced within each topic. Army Techniques Publication ATP 5-0.2-1 Staff Reference Guide Volume I Unclassified Resources December 2020 is applicable to all members of the Army profession: leaders, Soldiers and Army Civilians. The principal audience are staff members serving on battalion, brigade, or division staffs. Trainers and educators throughout the Army will also use this publication.

Covers the weapons, vehicles, equipment, and systems used by the United States military
