Like its predecessors, this edition presents the basic principles of the mechanics of fluids in a thorough and clear manner. It provides the essential material for an honours degree course in civil or mechanical engineering, in addition to providing material for undergraduates studying aeronautics.

This complementary text provides detailed solutions for the problems that appear in Chapters 2 to 18 of Computational Techniques

for Fluid Dynamics (CTFD), Second Edition. Consequently there is no Chapter 1 in this solutions manual. The solutions are indicated in enough detail for the serious reader to have little difficulty in completing any intermediate steps. Many of the problems require the reader to write a computer program to obtain the solution. Tabulated data, from computer output, are included where appropriate and coding enhancements to the programs provided in CTFD are indicated in the solutions. In some instances completely new programs have been written and the listing forms part of the solution. All

of the program modifications, new programs and input/output files are available on an IBM compatible floppy direct from C.A.J. Fletcher. Many of the problems are substantial enough to be considered mini-projects and the discussion is aimed as much at encouraging the reader to explore extensions and what-if scenarios leading to further development as at providing neatly packaged solutions. Indeed, in order to give the reader a better introduction to CFD reality, not all the problems do have a "happy ending". Some suggested extensions fail; but the reasons for the failure are

illuminating.

The philosophy of the text is based on the development of an inductive approach to the formulation and solution of applied problems. Explores the principle that heat transfer rests on, but goes beyond, thermodynamics. Ideal as an introduction to engineering heat transfer.

Climate change presents a large, complex and seemingly intractable set of problems that are unprecedented in their scope and severity. Given that climate governance is generated and experienced internationally,

effective global governance is imperative; yet current modes of governance have failed to deliver. Hayley Stevenson and John Dryzek argue that effective collective action depends crucially on questions of democratic legitimacy. Spanning topics of multilateral diplomacy, networked governance, representation, accountability, protest and participation, this book charts the failures and successes of global climate governance to offer fresh proposals for a deliberative system which would enable meaningful communication, inclusion of all affected interests, accountability and effectiveness

in dealing with climate change; one of the most vexing issues of our time.

The exploding global consumption of meat is implicated in momentous but greatly underappreciated problems, and industrial livestock production is the driving force behind soaring demand. Following his previous ground-breaking book *The Global Food Economy*, Tony Weis explains clearly why the growth and industrialization of livestock production is a central part of the accelerating

biophysical contradictions of industrial capitalist agriculture. The Ecological Hoofprint provides a rigorous and eye-opening way of understanding what this system means for the health of the planet, how it contributes to worsening human inequality, and how it constitutes a profound but invisible aspect of the violence of everyday life.

A biography of one of nineteenth-century America's foremost poets and public intellectuals.
