These are in-depth profiles of India's biggest business barons. These are the men who are powering new India's leap into the 21st century; the faces behind the great Indian success story. You'll find them all here. The traditional big names of Indian industry: Ratan Tata and Kumar Mangalam Birla. The new gurus of information technology: Nandan Nilekani and Azim Premji. The wizards of the sunrise entertainment and telephony sector: Sunil Bharti Mittal, Subhash Chandra and Rajeev Chandrasekhar . And many more. Essential to the depth of these profiles is that all of the subjects sat down for hours to tell Vir Sanghvi about their hopes, their dreams and their heartbreaks. These are profiles based on fresh information, direct from the mouths of the men of steel themselves. Nobody who wants to understand the contours of the Indian success story can afford not to read this book. It is a highly readable insight into the new India.

Drug discovery is all about finding small molecules that interact in a desired way with larger molecules, namely proteins and other macromolecules in the human body. If the three-dimensional structures of both the small and large molecule are known, their interaction can be tested by computer simulation with a reasonable degree of accuracy. Alternatively, if active ligands are already available, molecular similarity searches can be used to find new molecules. This virtual screening can even be applied to compounds that have yet to be synthesized, as opposed to "real" screening that requires cost- and labor-intensive laboratory testing with previously synthesized drug compounds. Unique in its focus on the end user, this is a real "how to" book that does not presuppose prior experience in virtual screening or a background in computational chemistry. It is both a desktop reference and practical guide to virtual screening applications in drug discovery, offering a comprehensive and up-to-date overview. Clearly divided into four major sections, the first provides a detailed description of the methods required for and applied in virtual screening, while the second discusses the most important challenges in order to improve the impact and success of this technique. The third and fourth, practical parts contain practical guidelines and several case studies covering the most important scenarios for new drug discovery, accompanied by general guidelines for the entire workflow of virtual screening studies. Throughout the text, medicinal chemists from academia, as well as from large and small pharmaceutical companies report on their experience and pass on priceless practical advice on how to make best use of these powerful methods.
