ACRP Report 78: "The original problem statement and objectives for  
ACRP 02-16 as developed by the project panel are restated as follows:  
'Increased levels of demand at airports in the United States may result  
in a growth in airport GSE activity and an associated increase in airport  
surface emissions. Local air quality and global climate change  
concerns, regulatory pressures, and the desire to be environmentally  
responsible have resulted in a growing number of airport programs  
around the United States looking to assess and reduce airport  
emissions. Although much is known about aircraft fleets, operations,  
and emissions, comparatively little is known about GSE. The available  
GSE data are outdated, unreliable, and limited. Accurate GSE data are  
needed by the FAA and airport sponsors to plan adequately and to  
balance the growing demands of air travel with air quality concerns.  
Proactive strategies that reduce surface emissions may help airports

address air quality concerns. As such, research is needed to obtain additional information on GSE equipment and to identify programs and best practices that could reduce GSE emissions for GSE owners, operators, and airports.' In response to this problem statement, the primary objectives of this research were to (1) develop a tutorial that describes GSE operations and identifies potential strategies to reduce emissions from powered GSE for use by GSE owners and operators and (2) conduct a representative inventory of powered GSE at airports to help the industry assess the contribution of GSE to air quality impacts at airports. ." --from p. 1.

More and more sailors and powerboaters are buying and relying on electronic and electric devices aboard their boats, but few are aware of proper installation procedures or how to safely troubleshoot these devices if they go on the blink.
