Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts,

who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

[This] text addresses the basic concepts of management, the roles of the manager, and the changing nature of both the contemporary organization and the contemporary manager. [The text] explores the managerial function of planning. [It] focuses on the organizing function of management. [It] explores the managerial function of leadership. [It also] examines the management function of control. The foundational principles of control are addressed, and specific attention is given to productivity, quality control, and information systems control. Control is principal tool for achieving quality in the products, services, and processes of the organization, as well as a tool for developing a competitive advantage based on enhanced productivity, increased efficiency, and superior quality.-Pref.

The impact of the economic downturn and the increase in financial scandals emerging from major corporations has generated a growing interest in governance issues and has emphasized the need for companies to be transparent in their dealings with shareholders and the markets. Although the issues in Asia are fundamentally similar to those in the rest of the world, there are some crucial differences in the way in which Asian corporations acknowledge and confront these issues and in the political and legal
